Engineering Students of The Naval Reserve
Allotted to Complete Studies Under New Plan

(Continued from Page 5)

s, will pursue a program of five or four additional equivalent semesters, respectively, as outlined by the Bureau of Naval Personnel at an institution designated by the Navy.

(d) Those who have at that date completed four equivalent semesters will pursue a program of four additional equivalent semesters as outlined by the Bureau of Naval Personnel at an institution designated by the Navy.

(e) Those who have at that date completed one or two equivalent semesters in good standing in accredited college courses, will pursue a course of study and training until the end of the college year current at the time of such enlistment or transfer.

As seen at present V-4, V-5, and V-7 students are placed on active duty, they will be required to report for active duty training in accordance with the rules of the Bureau of Naval Personnel. These courses will be given throughout the calendar year.

Enlistments of college students who have not passed their 18th birthday on or before the first day of the month that the present V-4 program is being offered, must be completed by January 1, 1942, in order that they may be enrolled in the new V-5 program.

The Institute students are eligible for selection at the present time for the new V-5 program. These students will be enrolled in the new program, if accepted, only that part of the curriculum will be modified so that it will be suitable for college work. The curriculum will be given subsequent to the first two semesters of the college courses, and the students enrolled in the Naval Reserve will be placed on active duty.

First, it is important to note that the Navy, in the Army's program, has eliminated the present V-3 program as a separate entity, for it is felt that the educational and professional development of our nation's youth should not be separated from the armed forces. The Navy, therefore, has decided to combine the V-3 program with the V-5 program, thereby creating a single, unified program for college students who wish to join the Navy.

The Navy's new program is designed to provide a comprehensive educational and professional training experience for college students who are interested in serving in the Navy. The program is structured to offer a wide variety of academic and professional opportunities, including courses in engineering, mathematics, physics, and chemistry, as well as specialized training in areas such as aviation, electronics, and naval architecture.

Each student who joins the Navy will be assigned to a specific campus, and will be required to maintain a satisfactory standing in his chosen field of study. The Navy will provide all necessary facilities and resources to ensure that each student receives a high-quality education.

The Navy's new program is expected to be highly successful, as it will provide college students with the opportunity to gain valuable professional experience while also contributing to the nation's defense. The program is designed to be adaptable to the needs of individual students, allowing them to pursue their academic interests while also preparing them for a career in the military or in other fields.

The Navy's new program will be implemented in collaboration with leading universities and colleges across the country, ensuring that students are exposed to the highest-quality education available. The program will also provide opportunities for students to participate in research projects and other extracurricular activities, allowing them to develop important skills and experiences.

In conclusion, the Navy's new program is a significant step forward in providing college students with the opportunity to gain valuable professional experience while also contributing to the nation's defense. The program is designed to be adaptable to the needs of individual students, allowing them to pursue their academic interests while also preparing them for a career in the military or in other fields. The Navy's commitment to education and professional development is commendable, and it is expected that the new program will be highly successful.

The Navy's new program is expected to be highly successful, as it will provide college students with the opportunity to gain valuable professional experience while also contributing to the nation's defense. The program is designed to be adaptable to the needs of individual students, allowing them to pursue their academic interests while also preparing them for a career in the military or in other fields.
