Flea Test Proves Air Of Cambridge Is Potent Poison

Hangover, N. Y., May 11 (B.O.)-In an exclusive interview granted The Tech, Professor Horace O. Tweedledum of Dartmouth College at Hangover, N. Y., declared that exhaustive tests made by him and his associates have proved that Cambridge air is unbearable and will be fatal to anyone over an extended period of time.

Professor Tweedledum stated that those who are in active service in the University, including all students, faculty members, and staff, are in grave danger of death from the terrible air of Cambridge. He further stated that the air is so toxic that any individual entering the area will suffer immediate effects and eventually succumb to its poisonous gases.

The tests conducted by Professor Tweedledum and his team involved placing various animals and plants in sealed containers and exposing them to the Cambridge air. All organisms exposed to the air showed severe symptoms and died within a short period of time. Professor Tweedledum concluded that the air is so potent that it poses a serious threat to the survival of all living beings.

The announcement of the test results has caused widespread panic and fear among the residents of Cambridge, who are now taking extreme measures to avoid exposure to the deadly air. The city has been closed to all non-essential personnel, and strict quarantine measures have been implemented.

MITAA Announces Drastic Revisions In Lacrosse Rules

The MIT Athletic Association recently announced the following revisions in the rules of lacrosse: they are to be followed by everyone in the United States, Canada, and South America under penalty of being expelled. All players are advised to read the new rules carefully to avoid mistakes during gameplay.

The new rules are as follows:

1. The ball must be thrown in the air and not on the ground.
2. Players are prohibited from carrying the ball on their bodies.
3. The goal must be 15 feet wide and 10 feet high.
4. The ball may not be picked up directly from the ground.
5. The game is divided into two halves of 20 minutes each.

Miles Cook, a member of the MIT lacrosse team, commented on the new rules, stating, "The new rules are a bit confusing, but we will adjust. The most important thing is to have fun and play the game safely."
