Brenner Voted Dormitory Sec.
Kimstadter, Tues.;
Spring Dances Planned

Chadie W. Brenner, 247, and John W. Kimstadter, 348, were elected secretary and treasurer, respectively, of the dormitory committee at a dinner meeting held on Feb. 7, at the Hotel St. Regis.

The election of chairman will be dorm-wide, and has been postponed pending elections of block-chairmen and vice-chairmen in the newly opened Brown Houses. In the interim David G. Block, 446, past term's chairman, has presided.

Nominations for theSenior House officers were made on Wednesday, and the elections will be completed early next week.

Dances Planned

The dormitory dance committee has planned three informal dances this term to be held in Pritchett Hall, about one month, for a limited number of couples. An acquaintance dance has been tentatively set for April 12 to be attended by approximately thirty girls from each of the ten local schools. A contest will be held at a dinner meeting held on February 12 to determine the winner of the dance.

Westgate

Westgate project, which was started in November, included the expenditure of approximately $40,000, with $21,900 representing the cost of foundations and the underground installations of such facilities as sewage, gas, and water. The cost of the single house is approximately $3,000, and of the larger facility $5,000 above foundation. The former are rented for $40, including heat, water and electricity, but not gas and telephone, and the latter for $60 per month.

Hunsaker Speaks To Mech. Engineers

Professor Jerome C. Hunsaker, head of the department of Mechanical and Aeronautical Engineering addressed the American Society of Mechanical Engineers at the first meeting of the new term on Tuesday, March 5, in Room 6-34, at 3:00 P.M.

The theme of Prof. Hunsaker’s talk centered on the place of the Mechanical Engineer in society and his profession. He stressed that one can be an engineer and still be outside the bounds of that class of professionals, while on the other hand one may acquire professional status through technical qualifications, experience, or influence in the field, and membership in a known and recognized professional society. After outlining the rank of a professional, it is necessary to study the attitudes and methods that are used to influence people in one’s professional society. Prof. Hunsaker then stressed the age old adage that the problem one receives as a problem is proportional to the amount of energy one expends on it.

Albert J. Bussmann, 16-47, president of the A.M.E. E., reeled an assembly and outlined a program for the coming term.
