I have spoken of the increase in the educational plant through additions made during the war. This added space is needed to take care of the great increase in the student body, but it has been made possible and required a wholesale redistribution of duties and equipment of the various laboratory plants. The general reorganization of space—the greatest since the Institute moved from Bostor to Cambridge—began within the present offices, and is requiring an expansion of our Chemistry laboratories, at a very severe drain on the Institute's educational plant through additions made during the past year and preview plans for the immediate future. In the laboratory, which is our major concern. (Continued on page 8)
