Applications Soon For WMIT Staff
Operation Delayed By Unfinished Transmitter

In the near future man living in the dormitories and the barracks will be able to apply for positions on the staff that will operate station WMIT. Applicants will choose one of three departments: business and advertising, engineering, and program. The students who are selected to do this work will receive valuable experience in the radio field since the student volunteers will be entirely responsible for the successful operation of the station. The business and advertising department will solicit advertising and generally care for the financial aspect of the station. The first job of the program staff will be to conduct a poll of the dormitory and barracks to determine what type of programs the students prefer. Selection for the various positions will be competitive, based on qualifications and past experiences of the applicants. When ready the applications will be available in the dormitory office and at some convenient place in the barracks. Members of all classes may apply.

Like most of the other freshmen, we had been wondering what makes a girl come to Technology. So, widening our press stand, we went up to the Margaret Cheney Room to find out. Since it is verboten for a man to get food in the Cheney Room, a crime punishable by hideous death, we made an appointment to meet the girls in Litchfield Lounge. Of the six freshmen co-eds invited, four showed up at the lounge. (For the benefit of the editors of a certain monthly, not all six co-eds here do resemblance bugsquiggle.)

Anne C. Rose is going to study architecture, her chief interest being art. As a matter of fact she almost went to art school but the results of an aptitude test and a discussion with a Technology admissions counselor influenced her to come here. Last Friday night she disguised herself as a Radcliffe girl and went to the acquaintance dance. Not one of the boys could tell that she was a fellow student, which ought to prove something. Her home town is right here in Cambridge. She was for a good dancer who likes sports. Anne complains about the wholesomeness of the co-eds and that the result of a certain monthly, not all six co-eds here did resemblance bugsquiggle.

New Course X Recruit

Kathleen M. Black comes from Litchfield. New Course X attracts her desire to be a chemical engineer. She is going to follow this path even though she doesn't realize how good she is. A local girl, now living in a dormitory, her type of man is an engineer and a gentleman. That excludes a good number of Techmen. As an added note, she should also be good looking, match.

Another of Same

Marie Amoroso comes from Flashing, Long Island, New York. During the term she lives at the new Technology girls' dormitory with Kathleen and coeds upper class girls. For the benefit of interested Techmen the address is 120 Bay State Road in Boston, telephone Cllllic 4344. Marie also intends to become a chemical engineer. She states that she was rather confused when she received a letter from the Interfraternity Council urging her as an incoming freshman to join a fraternity. What purpose all these frat houses anyway?

"The Tech" Interviews Frosh Co-Eds;
Six New Girls Join Maggie Cheney's Ranks

CO-EDS BRIGHTEN FRESHMAN CLASS

Three of the six co-eds members of the Class of 1938 snapped outside the Margaret Cheney Room. The girls are, left to right: Natalie Adelman, Kathleen M. Black and Anne C. Rose. The girls seem to favor architecture and chemical engineering as their courses at Technology.

Marie says her ideal man should be interested in sports, tall, dark but not necessarily too handsome.

Margaret T. Colman was not at Litchfield but with the aid of her program in the information office we tracked her down and succeeded in getting an interview. Although she is unsuitedly enjoying herself at the Institute, she as yet has not decided what course she is going to follow. She does state, however, that she is definitely not going to be a librarian. Another local girl, she graduated with Anne from Cambridge High and Latin School. When she attended the acquaintance dance she won a planter for a while but nothing happened. After she took them off, however, she danced the rest of the evening.

This highly specialized, graphically illustrated technical magazine for radio engineers is being offered to a limited number of subscribers in the United States. Also available—Monographs on Electronics—presenting latest scientific data—see coupon.
