Baker Forecasts Better Living Conditions Soon

Walker Student Staff hears Dean Speak

On New Improvements

Several phases in the long range program to improve living conditions at Tech have been brought out last Tuesday by Dean Baker in his talk to the student staff of Walker Memorial. He also commended the staff on their spirit and cooperation in helping to live up to the program.

One of the first projects to be completed, according to Dean Baker, will be the new cafeteria, which is being planned to care for the needs of students in one of the older dormitories.

Highly important will be the new lecture room in the dormitories, which is scheduled to be completed early next spring. The new room will provide a better atmosphere and more comfortable seating for the students.

Other improvements include new dormitories and the construction of a new Addition to Walker Memorial. The date for the completion of the Addition is not yet known, but it is hoped that it will be ready for occupancy in the fall of this year.

Although the Dean is hopeful of completing the projects as planned, he emphasized that it is necessary to be realistic about the time required for construction.

Dr. J. Oppenheimer Speaks on Tuesday

Alum Lab Head gives a Little Mem. Lecture

Dr. J. Robert Oppenheimer presented an interesting and valuable study on atomic and nuclear problems. His talk dealt with the role of science in modern society and the importance of interdisciplinary cooperation.

Dr. Oppenheimer emphasized the need for a better understanding of science among the public and the importance of science education for the future of the nation.

He discussed the history of atomic and nuclear physics and the role of scientists in shaping public policy. He also talked about the importance of international cooperation in the peaceful uses of atomic energy.

The lecture was well received and many students expressed their gratitude to Dr. Oppenheimer for sharing his knowledge and insights.
