During a discussion in an architectural design class, camp for the Salvation Army, it turned out that the Institute has no Blueprinting facilities at its own
whenever. The building architects impressed themselves in such a way as to leave no doubt in the minds of either their instructor or Dean Worster that such a machine would be a very handy gadget.

The only blueprinting facilities on the grounds of the Institute be-
long to the Photo service, a private business. Why doesn't Technology have a blueprint machine of its own? Among the Naval Architects, the M.E.'s, the Aero Engineers, and sundry others besides the Course IV men, there must be enough business to employ such a machine.

Among the more interesting mani-
festations of television that are na-
tionable around the campus is what has happened in the Burton Room. It so happens that the only ladies' room in the Dorms must be entered from the same Burton Door.

In fact, the only way to get to the
door of this ladies' room is to pass between the TV set and the array of chairs that form a theater in the room.

This situation cannot remain. The Dorm Committee does not consider it a real problem to have a young lady to get to this area without running the gauntlet of male TV gazers. Chalked on the wall of our draft-

room board the other week was the notice: "Watch this space for important notice Thursday mor-
ing."

It being Wednesday, we received to come back on the morrow for the work. We did so, and chalked be-

neath the first notice, we say the word:

"Good Morning."

Speaking of senior houses, there is a noticeable absence of dis-
satisfaction with the plans that have been announced for the spec-
ification of the new Senior House.

The antennas to which we refer does not concern us at all with the design of the building but rather with the possibilities that the dinning room feature might be ill run and that costs may be higher than in the old forms.

Psychic Research

(Continued from Page 1)
The last was started by a Harvard
man (by the name of Pervos)
something or other), and the room
located by Albert Hayes, an M.I.T.
student. He stopped at forty gold-
fish, since 40 was the year in which he was to graduate.

Rocket Society Plans Expansion

For its initial meeting of the fall term, the M.I.T. Rocket Society was honored to have Profesor Hsue-Shen Tsien, a member of the Jet Propulsion Laboratory, as its speaker. The subject of Prof. Tsien's talk was "The Prospect of Rockets as a Means of High Speed Transportation." Since the Society is planning to embark on a new program of expansion and pre-

paratory action," Prof. Tsien's talk was appropriate.

Aside from the more technical aspects of his lecture, Prof. Tsien announced the various applica-
tions of rocket power, the most spectacular of which was "long range high speed transport." This of course would include an ambitious undertaking as a trip to the moon or to some other planeta-

ry body. Prof. Tsien emphasized that any venture of this sort will remain a vision until mankind can support. Other applica-
tions of rocket power are "JATO" or "jet assist at take-off," and missiles.

Bostick's Goldfish

If you should happen into Char-
-ley's room you might be impressed in the goldfish (they'll soon have twenty or so plus tree. See picture.) It's too bad, but his regul-

ars' eletion campaign, Bostick's menagerie and forest, however, will not affect the Psychic Research Board in any un-

ertaking complete unto itself.

Ed Siringham and Joe Fleming

Feasted with parties hardly de-

scribed this coming week-end. Read-

ing the list are the Freshmen bid

tables, all planned for Saturday

night.

Kelley Kappa Sigma—Kappa Phi Alpha Tau Omega—Fall Brawl Phi Kappa Sigma—St. House mixer Sigma Nu—Freshmen Banquet The Deb's have put up a cry for rompers and ruffles, and little Boy Blue will appear. No, it's not their second childhood, it's their "Childish Party," a full-scale shindig given in their house and planned perhaps to undermum a few adult inhibitions. Rambles out in the Riverside Recreation Hall in dungeons will be the A.T.O.'s and their guests. Plans call for dancing, group sing-

ing, and music by the Techtonians. Cider and beer taps will be conven-

iently placed for the party-goes.

1 date, 2 thirsts, and old clothes are the necessary equipment for the Phi Kappa Sigma's fight against the ever-present enemy, gloom. The
