Steel Stretched, Ruptured By Prof. in Basement Lab

Physicists have often been described as a humorless lot. This section is no exception, but our interest is directed to a physics professor and another scientist who went through some rough play in their lab this week.

The problem was with a sample of steel that was stretched to its breaking point.

Ed Shingliman and Joe Flumigin were working on a project involving steel. As a part of the experiment, they stretched a sample of steel to its breaking point, causing it to undergo a "creep" and "stress rupture." The sample was then examined to determine the cause of the failure.

One of these spontaneous get-togethers turned into a bit of a mess when a student's hair got caught in the steel rods, leading to some comical scenes. The professor and student ended up having to bribe the student who had been entangled in the steel with a box of chocolates to leave the lab. Despite the commotion, they were able to conclude their experiment and present their findings to the class.

According to the professor, the experiment was a success, and the students were able to learn a great deal about the properties of steel.

Fraternity Findings

The fraternity house on Field Day the traditional rivalry between the freshmen and sophomore classes reaches its peak. Tonight the big event will be the annual Field Day, a day of unbridled competition between the two groups. The event will feature a number of activities that are sure to keep both classes engaged.

The day will begin with the traditional potato sack race, followed by a series of relay races and other physical challenges. The afternoon will be capped off with a tug of war contest, which is always a highlight of the day.

As the day winds down, the freshman and sophomore classes will have a chance to socialize and enjoy each other's company. The night will end with a bonfire and fireworks, creating a memorable experience for all those in attendance.

The following text describes the various activities that will take place on Field Day:

- Potato Sack Race
- Relay Races
- Tug of War Contest
- Bonfire and Fireworks

The day will be filled with excitement and competition, making it a day to remember for all those involved.

Letters to the Editor

Dear Editor:

I am writing to you regarding the upcoming Field Day. As an upperclassman, I believe that this event is essential for the growth and emergence of other students.

I would like to suggest that we implement new activities which tend to take the spotlight from Field Day. Techsacs and dorms and fraternities and sororities can be approached to get them involved.

With the growth and emergence of other groups, we can expect to see a more competitive and interesting event.

Sincerely,

[Student Name]

Just to give your voice a lift

When you make a long distance telephone call, Western Electric will give you a voice lift. It is not for vacuum tube repeaters. They give your voice a lift whenever needed carry it clearly from coast to coast.

Vacuum tubes and other electronic devices are playing an ever-growing part in your Bell telephone service. As the manufacturing unit of the Bell System, Western Electric makes millions of these intricate little things. To produce them to highest standards of precision and accuracy, Western Electric maintains a staff of technical experts.

Among the "Golddi Gifty" Clarke whistling witches, a man in a white suit, a girl in a red dress, and Stan Silver dressed as a heart in red ribbon, J. Nich Eseruch was the toast of the evening.

Among the "Goliath" Clarke whistling witches, a man in a white suit, a girl in a red dress, and Stan Silver dressed as a heart in red ribbon, J. Nich Eseruch was the toast of the evening.
