Our Duty (Continued from Page 1)
of our alumni were enlisted in the armed forces, headed by 191 and 46 admirals.

Bush. Tests demonstrate the value of M.I.T. as a national security asset. Whether we like it or not, so long as national security is an important factor in the over-all picture of the less-than-perfect world in which the safer all over country can exist. This same thing can be said of many other organizations throughout the nation, which are doing work in this respect. M.I.T. is in this precarious position among educational institutions.

But because an institution has a record of a more cheerful note. I would like to say something about men who have been in positions of real responsibility. Men whose character and careers have been in some degree shaped by that influence. It is a record which is characterized by the old "American Dream." It is the first test of any man or organization is no different than in biblical times: "By their fruits shall ye know them." There were men like B. F. Webb, owner of the American Textile Co., who in 1922, established America's first firm of consulting electrical engineers. Before America was aware of a third current, was he building the first great industrial organizations.

Mr. Vannevar Bush, '16, former Dean of Engineering and Vice President of the American Telephone and Telegraph Co., was married in 1922. He is now the President of the General Electric Co. While he has never signed any agreement, or been the director of any organization, the General Electric Co., a company which grew and prospered greatly under the presidency of Mr. Bush, has contributed millions to MIT research laboratory. The Bell Laboratories, was organized by Frank B. Jewett, '03, and operated continuously under his presidency until his retirement only a few years ago.

Paul W. Lincoln, '06, during the past forty-two years as superintending mechanical engineer of the Board of the Godfrey Tire and Rubber Company is a great figure in the development of America's rubber industry.

Coming to a somewhat younger group, I think for example of Lewis Hinsaker and Bush. The dean of the 1906 class, who, just became Professor Emeritus but still very active in chemical engineering department, is unquestionably the "dean and spiritual father" of all chemical engineers.

Mr. Sartori, '50, was the first selection in all the United States to become General Manager of Remington Arms Co., and was married to the daughter of Mr. Remington. When Carpenter recently left that post to accept an emergency mobilization and direction of the nation's scientific resources since 1940. He was put in charge of the nation's chemical laboratories.

Mr. Carpenter, who graduated with the class of 1946 and who was graduated with the class of 1946, was married to Marjorie Carpenter. Now he is with us again as head of the chemical engineering department, is unquestionably the "dean and spiritual father" of all chemical engineers. Mr. Carpenter is active in our chemical engineering department, is unquestionably the "dean and spiritual father" of all chemical engineers.

Mr. Lubarsky, '51; Warren Marcus, '50; William R. Kennedy, '51; George R. Myers, '51. The majority of its executive committee are M.I.T. alumni.

Mr. Lubarsky, '51; Warren Marcus, '50; William R. Kennedy, '51; George R. Myers, '51. The majority of its executive committee are M.I.T. alumni.
