Chinese Students Will Get $500,000 E.C.A. Allotment

Collapse Of Nationalists Means GoV't Support For Techmen Affected

Impending collapse of the Chinese Nationalist government has made it mandatory that outside aid be given to the Chinese students receiving their education in the United States.

This educational security is coming from the E.C.A. allotment to China. Amounting to $500,000, the money will serve to assure about 300 students of their education in the United States.

In order to be eligible for this E.C.A. aid, the student must be receiving his training in a science or technology. This means that the appendix, otherwise, Chinese students at the Institute will be eligible.

Ranking second only to Canada, the Chinese graduate body receiving their educations in Universities and Colleges in the United States numbers close to 600.

Placement Outlook Remains Favorable Geology In Demand By DONALD BERNEY

Continuing the series of articles concerning employment opportunities in the various courses, this article presents information obtained from the heads or placement offices of the departments.

Course X

June graduates in chemical engineering can expect a normal wartime demand for their services, according to Professor W. G. White.

Openings for undergraduates for summer jobs in the chemical industries are scarce, and only those with personal connections can secure them.

Starting salaries for bachelors are from $300 to $350 per month; masters $500 per month; doctors from $600 per year, increasing with the size of the program.

Course XI

Every geology student graduating this year June will have his choice of four or five positions, and some of the high preparatory schools.

What is needed, however, is that all undergraduates who want summer work in geology can be placed. Professor Whitehead said that the demand for geologists is growing, and that the demand is a healthy one.

The geological survey, oil and mineral prospecting, are the fields open to geologists; and the frantic work of the oil and mineral industries is shown by the demand for a large number of geologists.

Starting salaries for bachelors working in the United States are between $325 to $400 per month; for engineers, between $400 and $500 per month plus living expenses. The principal demand in geology, however, is for majors who will pay for commercial and geology. The Tech's banner aloft under the power of a nitrid mixture of methanol and canol oil.

A Carl Goldberg Nifty, the plane is on an eight-hour flight with a 20 mile span, and is powered by a class B engine. The cockpit is equipped with a 35' cable. The trailing edge is the invention of The Tech, and is powered by Garvin M. Moore's plane with banner "Keep Up With THE TECH"

Air Advertising Comes To Tech Plane Carries The Tech Banner

The Tech is taking to the air. Today at 12 noon and again at 1 p.m., a special chartered plane will take off from the Great Neck, "Vulcan's Stoolpiper," piloted by an Englishman, will leave for New York. The Tech's banner aloft under the power of a nitrid mixture of methanol and canol oil.

The flight path of the plane can be misjudged by onlookers, and contact can incur considerable annoyance. In addition, the ship might break a record or duplicate some of the great achievements in the aviation sport.

No Coast XIX, 1949, Garvin M. Moore's plane with banner "Keep Up With THE TECH" is scheduled to fly today in the Great Neck, "Vulcan's Stoolpiper," piloted by an Englishman, will leave for New York. The Tech's banner aloft under the power of a nitrid mixture of methanol and canol oil.
