When we arrived in our fourth country, we were not sure what was in store for us. The strikes—there were no demonstrators or manifestations of any sort in Helsinki—and everyone was completely calm and collected throughout the city.

The real reason for the strikes and demonstrations was that we felt being gradually forced out of the trade union movement and they were fighting to stay in. The democratic party took the fight to the streets and the whole country was on strike as the conflict developed. The city of Helsinki remained calm. But after one day, the entire country was under a state of emergency.

Most of the houses on the campus were occupied by university students. The police were not involved. They were perfectly convinced that they would be able to stay out of the next war if it came.

From the Marshall Plan people here I learned of the tremendous help that Sweden can be in the coming up and the current CEB. They and the British are evidently mainstays of the Western group. Even though the Swedes are gaining more knowledge of democracy, they realize what an important concept European cooperation is and in some way, they can make it become a reality.

Industry and Productivity

Industry is about the highest in Europe, and no too far below the United States. The industrial and machinery production and steel and mining activity is being carried on with a state of efficiency and satisfaction. Wages are agreed upon with the unions and the employees. The government has agreed to give it a try, and, and, and, and, and, and, and all that, they can make it become a reality.
