Forum Will Present Lab Course Gripe

Institute lab courses will be under fire at a discussion to be sponsored by the Student Faculty Committee on Thursday, April 6. Dr. J. J. Straton, Provost, will act as moderator. Students are urged to express their grievances on this subject at the meeting, where they can do some good.

A fair number of undergraduates, especially the freshmen, have complained about their laboratory assignments. Both the experiments themselves, and the order in which they are listed, have caused some dissatisfaction.

Mr. E. C. Lerner, in charge of the freshmen physics laboratory, believes that the course is quite satisfactory, considering the somewhat limited facilities available. Both students and faculty members will have an opportunity to present their views at the April forum.

IYC Elects New Committee Heads

Elections for the coming year highlighted the monthly Inter-Fraternity Council meeting held last Thursday evening. The elections were as follows:

Robert R. Stephenson, '51, (Phi Gamma Delta), and Robert M. Briere, '51, (Sigma Chi) were elected as new members to the executive committee. Lester W. Preston, '51, (Sigma Alpha Stu) was chosen as the new chairman to the investigations committee, and Ronald Greenwald, '51, (Sigma Alpha Mu) was re-elected head of the scholarships committee. New dance committee chairman will be William G. Austin, '51, (Delta Tau Delta). At the meeting held last month Bill Shinkle, '51, of Theta Chi Fraternity replaced Jack Kennedy, '51, as president of the I.F.C. The elections became effective at time of the next meeting.

Dorm's dining service buys their
food at decent prices SOON! I have offered a sug-
最低 standards to be secured.

Ganow (Continued from Page 3)

universe Expanding

Dr. Gamow, states that every galax-
ies are moving away from each other at tremendous veloci-
ties. In other words the universe is expanding and, because the kinetic energy of the moving galaxies is much greater than the gravita-
tional potential energy of the sys-
tem, it will apparently never con-
tract again.

The velocities of the galaxies are known, and the distances, as well as the times, when the universe was completely compressed can be cal-
ulated. This time turns out to be
about one billion years. Dr. Gamow concludes then, that this was time of the origin of our pres-
ent universe.

University Expanding

Dr. Gamow, received from our solar system the next com-
plete unit of which we are a part, the milky way galaxy. The milky
way is only one of many such galax-
ies, he explained, and the actions of these great masses of stars give rise to the clue to the age of the universe. It has been discovered that the galaxies are moving away from each other at tremendous veloc-
ties. In other words the universe is expanding and, because the kinetic energy of the moving galaxies is much greater than the gravita-
tional potential energy of the sys-
tem, it will apparently never con-
tract again.

The velocities of the galaxies are known, and the distances, as well as the times, when the universe was completely compressed can be cal-
ulated. This time turns out to be
about one billion years. Dr. Gamow concludes then, that this was time of the origin of our pres-
ent universe.
