Industrial Management School Plans Laid

(Continued from Page 1)

The Dean of the School of Industrial Management described the new programs in manufacturing processes and emphasized the importance of the program in the field of management, as distinct from engineering.

"The dean of the School of Industrial Management described the new programs in manufacturing processes and emphasized the importance of the program in the field of management, as distinct from engineering."

"In Mr. Brooks we have found a man who has a thorough understanding of the relationships between men and industrial processes. He is the man who can express the essence of the new school line the best and make it most effective in encouraging young engineers for careers in business and industry."

"In Mr. Brooks we have found a man who has a thorough understanding of the relationships between men and industrial processes. He is the man who can express the essence of the new school line the best and make it most effective in encouraging young engineers for careers in business and industry."

"It is significant that the visiting committee of the Department of Business Administration which Mr. Brooks was chairmen of made a careful study of ways of increasing the effectiveness of our program in management training. This study stressed the importance of the program, the use for "in the field" by the students in industrial experience, and the opportunity to develop a strong graduate program."
