Fire in Building 'Out Put Out' By The Firemen Arrive

There was a fire in the basement corridor of building 1 about eight p.m. on Saturday, May 5. The fire broke out in a rubbish pile in the corridor and rapidly spread smoke through the buildings 1 and 9. Discovered by the night watchman, the fire was put out in short order in spite of the excitement of several late night reclining students who evacuated the areas from as far away as the first floor of building 3. According to a laudor who was on the scene, the reason the fire got so far as it did was that there is no sprinkler system in the base- ment of building 1. "It took two or three freight cars to build up the latter half of building 3 before they installed automatic sprinklers there, he said. "Now they will put them in 1 building."
