Hillel Tragedy: "Views On Religion"

As Hillel's first student began to tell a story of the tragedy, "Views On Religion" presented by the Student Committee and Rabbinical views on Religion, Hillel presented Dr. D. C. Williams, Sunday, November 11, at 3:00 p.m., 7:00 p.m.

Dr. Williams is Chairman of the Department of Religion at Wayne University, Detroit, Michigan.

Tell him the type, naturalness, and of the people with whom you would like to correspond and they will be glad to send you names and addresses.

Frosh

All Freshmen A-1 and A-2 Fall activities and November and November 3. All Freshmen must register with their instructors for Winter classes beginning November 15.

Civil Service

Students interested in government executive service should contact the N.A.A. International Correspondence, Box 125, Student Center, Wayne University, Detroit, Michigan.

Basic Research

(Continued from Page 1)

Cytology, which is the science of color study. Today, when it was first published, copies were sent to the students. These people were so impressed that they acted as salesmen for the first 20 years. No application of any kind was used or even needed.

Other Science Facts

This basic color research has brought more about than a few interesting applications. There are chemical applications, clothing peaches, all of which use an understanding of the same color. It can be produced, so that someone is interested in art once at once. Even something can be picked out; though the other, and hence think they are spoiled, automobiles parts can be painted in different plastics and still match when assembled. Color printing has been reduced to three equations. Other territories are being worked out so that it can be determined how closely two objects can be matched.

This gives a small idea of what is being done in just one field of basic science in American chemistry, with research in nuclear chemistry, vitamins, space science, and hundreds of other fields, is such a small part of this program as physics. Indeed, every science today is being used in all of these fields as the backbones of all modern science.

There is little need of worry over the suspicion that basic science is neglected in the United States, or that it is impractical. The basic part of all of this is done in our universities where the scientists of tommorow are being trained. They are in contact with it from the beginning of their educations, and should be able to keep it alive.

You have got up early in the morning to put one over on this cook-of-the-week! When it came to making "quick-trick" experiments of cigarette mildness, he stated flippantly, "That's strictly for clucks!" How ya going to keep 'em down on the farm when they know there's a confidence trick to prove cigarette mildness! It's the sensible test --- the 30-day Camel Mildness Test, which simply asks you to try Camel's as a steady smoke --- on a day after day basis. No map judgments. Once you've enjoyed Camels for 30 days in your "T-Zone" (I for Throut, T for Taste, I for Inexpensive, you'll see why . . .

After all the Mildness Tests . . .

Camel leads all other brands by billions.
