OAK RIDGE GIVES NUCLEAR PRACTICE

Located in the Tennessee Valley, about 85 miles from Knoxville, is the M.I.T. Engineering Practice School at Oak Ridge. The objective of the school, which opened in 1948, is to educate, by the practical application of nuclear science, selected engineering students from MIT in the fields of science and engineering.

The school consists of three atomic energy disciplines: Mechanical Engineering, Nuclear Engineering, and Chemistry. There are four areas of study: Physical and Chemical Processes, Nuclear Reactor Engineering, Nuclear Power Engineering, and Nuclear Chemistry. The course work in each area involves the study of mechanical and chemical processes of nuclear power production, the design and construction of nuclear power plants, and the application of nuclear chemistry to the field of energy production.

The Oak Ridge National Laboratory covers projects ranging from basic studies in physics and chemistry to the development of new products and processes. The laboratory is equipped with the latest machinery and equipment, and the students have access to all of the facilities available to the students.

The students work in conjunction with the plant men. In addition, they have access to the latest information in the field, and they are exposed to the latest developments in nuclear technology.

The students are expected to complete the program in two years, and they are required to pass a final examination. The program is open to students who have completed two years of college and who are interested in pursuing a career in nuclear science.

M.S. AND PH.D. CANDIDATES

The M.I.T. Engineering Practice School at Oak Ridge offers M.S. and Ph.D. candidates the opportunity to gain practical experience in the field of nuclear science. The program is designed to provide students with the knowledge and skills necessary to succeed in the field.

The students are expected to complete the program in two years, and they are required to complete a comprehensive examination. The program is open to students who have completed two years of college and who are interested in pursuing a career in nuclear science.
