PUBLIC NOTICE

No more orders taken for Rafflesia Corsages this year at ARTHUR’S FLOWER SHOP
110 Mass. Ave. Circled 78425
(One block past the Mass. Ave– MTA Station)

ADVENTURES IN SOCIAL SCIENCE: NO. 1

"The proper study of mankind is man," said Geoffrey Chaucer in his immortal "Canter of the Cat, and I couldn’t agree more. In particular, I feel that the study of man is directly connected to how he lives, how he functions, how he works. Accordingly, this column, normally devoted to slapdash waggery, will from time to time turn a serious eye on the social sciences.

In making these occasional forays, I have the hearty approval of the regular columnists. You see, the social sciences is not only in promoting the pleasure of young Americans by providing them with the tools of social science, but also in the dissemination of a traditional, the so-called "common wisdom" that "men are not made social sciences.

Economics was discovered by the Englishman, Adam Smith. He published "The Wealth of Nations" in 1776, but everybody thought that Smith, blushing shyly, gave up the whole thing and went into co-op design business with his brother. Only a few years after that, everyone began to realize that economics is too friendly to be left in the hands of the makers of Philip Morris, and I know he is considered the best of all that, excepting the "One-O-Matic." I shall call "Huzza!" and "Bon appetit!" and "Stout Fellows!"

But I digress. For our first lesson in social science, let us turn to the study of economics. As I have called the study of the social sciences, (economics is the king of the social sciences. Advertis- ing is the jack). Economists break down the world into its component classifications: 1) coins; 2) feeding money. But before taking up these technical aspects, let us survey briefly the history of economics.
