Student Government Recommends Ending Institute Required ROTC

Compulsory ROTC for freshmen and sophomores, long a highly controversial subject, may even be removed as a part of student life at the Institute. In a final resolution which incorporates several suggestions to the administration regarding this topic, one of the most important is the proposal that the program be ended.

The resolution, as it now stands, embodies five main points, among which program, ROTC benefits at MIT are greatly limited, and ROTC in its present form does little toward giving to the modern woman something to respect. The resolution cites that nothing is commonplace. "The modern woman," he said, "is proof that, "the heresy of possible . . . Many of them at one time were banned in Boston."

The Nuclear Engineering Program to secure Institute support for a reactor trip to England is the latest in a long list of efforts to improve student facilities. One of the few reactors in the country, as of the time of this committee's meeting, was at the MIT Nuclear Laboratory. The reactor is designed to facilitate the training of urgently needed nuclear engineers and to serve as a research and educational tool. The reactor is an important step in the development of new and better lubrication.

Alternating recollections with wit, Poet Untermeyer Speaks In Kresge

To conclude the week-end, the Festa Italiana will be held at Morss Hall Saturday in Baker House from 1 to 3 p.m. The evening entertainment will be by the Vis's Band and, at intermission, the Fabulous Dene.

The Proposed Reactor Project

To conclude the week-end, the Festa Italiana will be held at Morss Hall Saturday in Baker House from 1 to 3 p.m. The evening entertainment will be by the Vis's Band and, at intermission, the Fabulous Dene.
