National Student Association Approves Desegregation Proposal; MIT Plans

MIT approves strong resolution on desegregation, the establishment of a Human Relations Institute, to be under the supervision of the USNSA but with separate personnel. Of particular interest to MIT was the adoption of a resolution laying the basis for a conference here next fall on rising enrollment and related problems. The resolution recommended strongly that academic freedom be preserved, that full use be made of existing equipment and teachers, and that increased emphasis be placed on junior and vocational colleges. At the MIT conference in the spring it is expected that students and educators from all parts of the country will arrive at solutions to the problem of providing advanced education to all those qualified.

227 Freshmen Enroll In Phys Five Percent Increase Over

This year, almost twenty-five per cent of the Class of 1960 recalled in Course Forty, Physics. This large percentage was consistent with the previous several classes, and this course continues as the second most popular in the eyes of freshmen, next only to Electrical Engineering. The interest in this theoretical subject has similarly increased since the end of the last war; the physics department attributes this trend to a great part in the interest generated by the much published field of nuclear physics.

This year's enrollment in course eighty shows an increase of about five per cent over the class which entered in the Fall of 1955; for the first time the number has risen above 200. Out of last year's 180 freshmen in the course, 135 are continuing this year; and if the number stays at this large figure, and considering the larger number of freshmen, the physics department will soon be cut with a problem of space, as the upperclass lab space in the Mills Building is being used to accommodate part of the new Civil Defense Computer, now under construction.

According to recent reports there are about twenty physicists employed in the States at the present time; it is estimated that in the next several years there will be from twenty thousand more. It is expected, however, that it is presently graduating about one hundred of the total physics yearly high school graduates.

Currently the physics department is planning a series of lectures for those interested in this field, many purpose of which is to acquaint potential physicists with fields closely related to their curriculums.

FRIDAY, OCTOBER 5

You get a lot to like
- filter
- flavor
- flip-top box

This Marlboro is a lot of cigarette. The easy-drawing filter feels right in your mouth. It works but doesn't get in the way.

You get the man-size flavor of honest tobacco. The Flip-Top Box keeps every cigarette in good shape and you don't pay extra for it.
