Since 1912, a "new look" in educat-
ing industry has come to MIT. In that year, the School of Indus-
trial Management was born from a 4-year Course XV, then part of the School of Humanities.

The School of Industrial Management was born from a 4-year Course XV, then part of the School of Humanities.

The typical 11-month course leads these men through a thorough study of the fundamentals of management and of economic policies. They gain an understanding of the environment of business and of the impact of industry on society. Thus they gain a broader view of the effects which their decisions may have.

The organization of the School of Industrial Management brought significant changes to the Department of Business and Engineering—the undergraduate Course XV. Dean Clark words the unique aspect of the undergraduate Course XV. "We know of no other, similar course based on being tutored in economics and statistics."

The typical 11-month course leads these men through a thorough study of the fundamentals of management and of economic policies. They gain an understanding of the environment of business and of the impact of industry on society. Thus they gain a broader view of the effects which their decisions may have.
