30,000 Expected On Campus
Strobe Light And Movies for Open House

Thirty thousand visitors will jam the Boston area on Friday and Saturday before noon of MIT for the biennial Open House tomorrow weekend, according to preliminary estimates.

Many exhibits and displays will be set up throughout the seven large halls of the Cambridge campus. Particularly exciting will be a new science fiction display, as well as demonstrations of the MIT-Wright Flyer, the first successful airplane, in the Aeronautical Laboratory.

The Open House program does not end on Saturday night. Professor Lawrence J. Burdick of the chemistry department will deliver a lecture, "Using Solar Energy" and "Fun with Chemistry." "All exhibits have some educational value," says Chairman Virgil Browne.

In Moscow Postpones Stand Off

The date is set at April 30th—the date of a previous peace conference—after a long delay to demonstrate the rigid line of the East as far as Cuba is concerned.

The date was chosen because of the 25th anniversary of the founding of the United Nations, which will be observed on April 17th.

The East's position is that the date is too late for the negotiations to start, and that the conference should be held at a later date.
