Start your search by finding the phrase you want to search for. For example, if you want to find information about the price of a ticket, you can search for the keyword "$7.50". This will help you quickly locate the relevant information in the document.

Once you have found the relevant information, you can copy and paste it into your application. For example, if you want to find the price of a ticket, you can copy the text "Series tickets: $7.50" and paste it into your application.

If you need to extract specific information from the document, such as the date of an event, you can search for the keyword "Sun., Feb. 16, 3 p.m." This will help you quickly locate the relevant information.

After you have extracted the necessary information, you can use it to write a report, create a summary, or incorporate it into your project. For example, you can use the information about the price of a ticket to inform your audience about the cost of attending the event.

If you need to search for more information, you can continue searching the document for similar keywords. For example, if you want to find information about the time of an event, you can search for the keyword "Wed., Nov. 20, 8:30 p.m." to locate the relevant information.

By using these steps, you can effectively extract information from the document and use it for your needs.
