Insecmm Advisory Councils Plan
To Investigate Problems At MIT

Institute Committee has formed several internal advisory councils to investigate specific problems at MIT. Acting on the recommendation of Committee president Arnie Amstutz '59, Insecmm plans to fund these groups and why past activity in this realm has not always been successful. With this information they will then form specific methods of attack.

The first council formed will investigate communication between the faculty and the students. Executive Committee will contact members of the faculty staff and liaisons and will transmit the information.

A tentative agenda of another council includes the problems of Insecmm publicity. This group plans to study a systematic and effective use of The Tech and take the MIT men with the activities of the Institute's student governing body. The cumulative average system of figuring a man's standing will be examined. A group will find out what the faculty thinks of the same, and what other grading systems could be used if the exam is abolished as the measure of scholastic standing.

The pros and cons of adopting a truegrade method of teaching in the advanced classes will be examined. The attitudes of instructors and students, administrative difficulties and other aspects of the proposal will be discussed.

Another council will look into the design of the senior ring. Possibilities of a design change will be the main topic of discussion in this group. Activities of the National Student Association will be the topic of study in another group's meetings. The methods and progress of higher education on other campuses across the country will be discussed. Recommendations will be made to the Institute if anything worthy of attention is found.

You are cordially invited to hear Dr. J. B. Rhine, Director Parapsychology Laboratory, Duke University, speak on "Science and the Human Spirit". There will be an opportunity for questions.
