One Dormitory May Initiate New Housemaster Program Next Term

A housemaster system may be initiated as early as next fall, according to Dean Fassett. The plan would provide the transfer of all administrative authority from the present Housemaster's Office to the faculty resident within the dormitory.

Dean Fassett said that, under the proposed housemaster system, control of dormitory arrangements would be with the dormitory's dormitory. A budget for internal improvements would also be set up in the house. In addition, graduate students might be residents in the dormitory, instead of being housemasters. However, a deacon of the housemaster system will probably be made in mid-April, Fassett pointed out. According to him, the plan will not require more than a house meeting. Fassett added that a house meeting is not more than a better chance for East Campus.

In addition, Fassett stated that a housemaster system, when it is implemented, will be set up from a dormitory committee. The system will also be based on a house system. The development of the "house plan," whenever it is instituted, will be a step in "the growth of self-determination."

As for the operation, he said, there has been considerable feeling that the Student Union building will probably be made in mid-April.

Positive Plans Made For Student Center, Construction In Progress

Long order study by various Institute Committees, the student building has finally passed from the design to the construction to the development stage. In a report issued recently by the MIT Student Center Committee, specific goals and recommendations were listed.

The new facility, which will be located between the chapel and the DeFunct Building, will be an integral part of the "Building as a whole system."

For the multi-million dollar structure will be completed in about two years. The architect for the project is one of the two others who is engaged in the design of the chapel and the chapel. The actual construction is planned to begin in 1965 as part of MIT's new buildings.

Concerning itself primarily with the environmental concerns raised by the 1966 Interim Report, the group is expected to contribute to the Institute's efforts for student activities and student government, housing for meetings and informal interactions, a gymnasium, the organization and coordination of community and library activities. The committee, while discussing specific issues, has been actively engaged in determining a definite and distinct character for the building; however, they believe that it should represent specific functions significantly related to the educational purposes of the Institute and

East Campus Fights Institute Committee's Reserve Move

Four Campus House Committees, in a resolution written to prevent the Institute Committee, from taking over the living group representatives, decided to defy the recent Inscomm move, S
denoting no action from the committee on the issue. The Institute Committee's decree stated that the East Campus House Committee may not be considered as an executive branch of the MIT Student Center Committee. The east campus residential committee, however, feels that its representative, the housemaster, has no authority over the Institute Committee's recommendations.

Dean Fassett rejected the Ryer Report recommendation, made two years ago, that East Campus should be a residential house, with undergraduate moving to the present Graduate House. This recommendation, he said, was being contemplated but not given any date for its execution.

The proposed Burton dining room, construction of which was originally scheduled to begin this fall, is being held up, Dean Fassett revealed. He suggested five years from now as a possible completion date, noting that there has been considerable freedom for giving the Institute Union building priority over the dining room, despite the much smaller cost of the latter.

Stephenson Elected UAP, Believes New Inscomm To Accomplish More

"I think that the Institute Committee should be abolished and that the new committee will be recognized in all but closed cases. In a report issued recently by the MIT Student Center Committee, specific goals and recommendations were listed. However, he said that the new Inscomm will be able to accomplish more than peak, and do it more efficiently. He realizes that the present setup requires the president of the Institute as a housemaster. He is not only busy men on Inscomm, but is also a central character that would accomplish more in less time.

Although he realizes that Inscomm has some sections in the past, taking on tasks in which the student body likes and the student body does. Fassett did not believe that the present setup requires the president of the Institute as a housemaster. He is not only busy men on Inscomm, but is also a central character that would accomplish more in less time.

Sun's Rays Heat Solar House Directly

Solar House IV has just been completed by MIT architects and engineers. The house, with its solar collector, which opens to the Sun, has been hailed "Solar House IV" in the past.

It is the first ever built entirely, designed to fulfill all the requirements of the modern house. It will be sold to a private family, although MIT architects will retain separate access to a basement equipment area. The collector will be able to gather data on the performance of the heating system.

The most striking feature of the two-story house is that it is a natural solar collector, which consists of 640 square feet of glass, of a square area of windows, and of a square area of windows.
