Inscimm Elects Five Members of Baker Memorial Committee

On last night's Inscimm agenda was the election of the members of the Baker Memorial Committee, which was made necessary by the death of John G. Burke, Barry '39, who was appointed to the position of varsity basketball coach at MIT.

Burke's Inscimm同志们 "discovered" the Baker Memorial Funds and appointed a five-member committee to decide whether or not the Memorial Committee will continue to exist. This committee consisted of Barry, John G. Burke, Barry '39, announced yesterday.

Although plans for the Memorial Committee are far from complete, it has been decided to go on with the project, and plans are now being made to use the funds raised by the committee for the benefit of the students and the community. The committee will meet regularly to discuss the progress of the project and to make plans for the future.

The committee consists of five members and is self-perpetuating. If a position becomes vacant within the committee, the five members must elect a new member to fill the position. The committee members are expected to attend all meetings and to work on the project on a regular basis.

Interns Picked for New Program of Management School

MIT's new Sloan Teaching Internship Program received its first three interns this week. The program offers opportunities for further study in business administration and related fields. The interns are:

- John J. Flaherty, Sloan '60
- Charles A. Egan, Sloan '60
- Donald B. McKee, Sloan '60

The program will continue to grow and new interns will be added as the program develops.

Varsity Basketball Coach Named

John G. (Jack) Barry of Methuen, a basketball coach for the past three years, was appointed varsity basketball coach at MIT.

Barry is a native of Methuen, N.H., and has been a member of the Methuen High School basketball and baseball teams. He compiled a record of 28 wins and 12 losses in three seasons at the university.

Barry will also establish a basketball scholarship for Methuen High School students who wish to continue their education at MIT.

Heavy Crews Away, Lights to Row Here

Midwest rowing fans will have a chance to see the Boston men in action tomorrow when the varsity heavyweights meet Columbia and Wisconsin at Wisconsin. The trip is one of the season away from the East coast for any of the MIT crews.

The varsity heavyweights have been permitted by any means, however, as the lightweight singles from Cornell, Columbia and MIT battle for the Cup. Monomoy Eagle JV and Freshman men's races will be held in conjunction with the annual regatta.

Weather's beatings

MIT's annual Military Day was observed as the event on the calendar. The Navy and Air Force ROTC regiments were on parade in Kresge Field, and certificates and medals were awarded to outstanding student officers.

In addition to better and larger quarters, WIXM will be in a more convenient location and will share a newly acquired studio space in the school's basement.

Heavy crews will be away for some time. They have been invited to Boston to represent the varsity in the American Championships.

For a reason which is not at all clear, the committee failed to elect a new member after several years. The group was, for all practical purposes, dead. The members of the committee had not met since the fall. The faculty advisors for the group were not aware of its existence and did not inform the members that they were no longer needed.

The committee's role is to recruit new members, organize the group, and provide funding for the group. The group has been in existence for several years and has been active in organizing and recruiting new students.

The group will meet on a regular basis to discuss the progress of the project and to plan for the future.

Selected Bacteriologist

To Direct Biology Research Program

A distinguished bacteriologist, Dr. Salvador E. Luria, has been appointed professor of biology and director of the Biology Research Program at MIT.

"As an international authority in virology and bacteriology," Dr. Luria said, "I will be able to bring a fresh perspective to the department's expanding research and teaching activities. I also hope to establish a new laboratory for virology and bacteriology, which will be dedicated to the study of the mechanisms of bacterial resistance.

During his tenure as director of the department, Luria will be responsible for overseeing the department's research activities, including the appointment of new faculty members and the development of new research programs.

Luria's appointment is expected to bring new energy and enthusiasm to the department, and is seen as a significant step forward in the department's efforts to stay at the forefront of biological research.
