One-Hundred-Foot Antenna Crowns Walker

The newest addition to the MIT skyline is the antenna tower, shown here being erected at great expense and using thousands of dollars in labor. It was originally intended for use by both WTBS and WIMX. Preliminary studies indicated the hundred-foot height provided by the tower would be satisfactory for WTBS's contemplated switch to FM. The Institute went ahead and bought... the pole. Shortly thereafter, precision calculations showed the top of the antenna had to reach 220 feet up to obtain the minimum coverage demanded by FCC regulations for the proposed WTBS FM station. With W.I.M.X., sole user, less, the pictures, put on its antenna. Photos by Boyd Talus, '69.

OUR INTERVIEWERS

WILL BE HERE

MONDAY, FEBRUARY 15

You're invited to get the facts about Con Edison's growth and what it can mean to you.

We're spending four million dollars a week to expand—over a billion dollars in the next five years to find new and better ways to meet New York's demand for vital electric, gas and steam services.

Our growth has increased the need in every department—technical and non-technical—for ambitious and enterprising young men. And...of the 791 top management positions in the company, 750 will fall vacant in the next fifteen years, mainly through retirement. These jobs will be filled by the men who join us now. Our program for college graduates offers major assignments immediately and a clear road to rapid advancement.

We invite you to talk to our interviewer while he's on campus. Let him give you the full details about the career opportunities awaiting you at Con Edison.

Your Placement Office has copies of our booklet "Con Edison—The Right Place to Build Your Future." Ask for it today.
