USN Sends NROTC On Vacation To Training Station At Pensacola

The advantages of membership in NROTC were discovered over the mid-term vacation by 35 members of the MIT NROTC Unit who took a Navy-sponsored trip to Pensacola, Fla. Escorting CDR R. B. Giblin of the Unit Staff, Mr. C. H. Schreiber of the School of Industrial Management, and commanded by Midshipman Dan Whitney, the group was indoctrinated in the program of training of Naval Aviation Cadets at Pensacola, where the center of Basic Naval Air training is located.

During their three day visit, the Midshipmen saw many of the facilities at close range and experienced first hand the way of life of the Cadets, sharing their costumes, mess and revels. The day spent aboard the aircraft carrier USS Atlasiant observing air operations was the first trip to sea for many of those present.

The facilities for experimentation in flight physiology were particularly interesting to the Tech men. Pensacola is doing pioneer work in rare atmospheres and high acceleration effects on humans and animals. A “disorientation capsule” which rotates in two planes simultaneously is currently being developed to train the Mercury Astronauts and aid in designing their vehicles and vehicle dynamics. Also on display were space monkey Baker, centrifugal acceleration devices and various experimental high altitude suit designs.

that were

let's level with each other

You're looking for a job. Not just any job, but one where you know for sure you'll be doing exactly the kind of work you are most interested in. One that will give you every chance to grow with the company.

Sure, fringe benefits are fine. Link Aviation offers as good or better than the rest. But how about the day-to-day operation? What kind of assignments will you get? Check these opportunities available right now at Link:

- zero-mechanics design work
- analog computer design, solving linear and non-linear differential equations.
- function generator problems using 1, 2 or 3 variables, utilizing both digital and analog techniques
- resolving solutions relating to fire control equations for rockets, missiles and bombs
- navigational equation solutions: simulation of fire control and navigational radar systems
- simulation of complete missile systems
- transformational circuitry, pulse generation, amplifiers and digital computer components
- optical and visual display systems

Many of the above techniques are used in Link projects, such as building jet simulators for the Boeing 707, Douglas DC-8, Convair 880, Lockheed Electra, the Navy's A3J jetfighter, or the fire control on the E-58. And there are others that we can't talk about just yet.

There they are...some of the current opportunities at Link, both in Binghamton, New York, and in Palo Alto, California. If these or similar positions interest you, contact your Placement Office for an interview on the following schedule:

Saturday, February 20
Saturday, February 27
Saturday, March 5
Saturday, March 12
Saturday, March 19
Friday, April 8
Friday, April 15
Friday, April 22
Friday, April 29
Saturday, May 7
Saturday, May 14
Saturday, May 21

All shows at new times:
All shows at 5:00 — 7:30
except 6:00 and 9:00
Admission to all films
30¢ at door
Cs — Cinemascope
C — Color
K — Krooge (all others in 10-250)
