**EMERSON ELECTRIC\**

**A Message to E.E. Graduating Engineers**

"Why should a graduating engineer consider Emerson Electric?"

That's what we recently asked our youngest engineers... men who graduated in the past 2 to 28 months. They were in your exact classes not long ago, making important decisions.

Here are their answers:

- **You'll get the “GO” sign at Emerson** to get right into the thick of advanced projects.

New openings offer a future full of opportunities. Where do these openings come from? From the fact that Emerson is a dynamic growth company. Sales have advanced from $45 to $90-million annually in the past five years.

These advantages cover only a few of the many reasons why our young engineers believe Emerson offers more.

Here, in brief, are examples of Emerson's diversification:

- **Commercial Distribution Division**, established in 1980, is the nation's leading independent supplier of fractional horsepower motors. We manufacture a wide variety of fans, air conditioners, are world leaders in brushes, brushes and brush holders, a complete line of electric heat equipment.

- **Electric and Wire Division**, formed in 1985, is the world leader in power supply and control systems for industrial applications, and a leading designer and manufacturer of high voltage equipment for electric and magnetic field control systems, servo devices, analog and digital computers, superconducting magnetic field control systems, automatic test equipment for advanced electronic systems, missiles, rockets, launchers and missile launch units.

Find out how you can go... and grow... with Emerson Electric. Meet Emerson's engineering representatives and discuss your future with them. It is impossible to make a date, write immediately to Byron Johnston for full details.

Sign up for your interview at the Engineering Placement Office. Don't put off your future... do it today!
