### Second Straight Year

**Ski Team Wins Conference Cup**

The MIT varsity ski team won the New England Intercollegiate Ski Conference championship for the second straight season Saturday, beating BU slalom in the Amberone Giant Slalom at the Dartmouth Skiway in Hanover, N.H. The victory was the sixth of the season for MIT and pushed them ahead of Brown University. The two schools had been in a tight battle for the title all season.

Roberto Peccei, '62, and Pete Goldstern, '62, paced MIT in Saturday's meet, taking seventh and third respectively. Ulf Blom, '80, placed 18th while captain Ted Ansbacher, '60, finished third in the competition against the NEISC teams.

**Fast Start Aided Beavers**

The MIT team got off to a good start this year, taking a clean sweep of the Brown University Giant Slalom at Cranmore Mt., N. H., January 30. Last year the Beavers gained only a fifth place finish in the Brown competition.

The MIT squad added to their victory string the next week, winning the New England College Slalom at Mt. Sunapee, N. H., in a close race. But at the Tufts College Giant Slalom, the Beavers were without the services of two top ski area, besting Northeastern and BU.

The following week at the Suicide Six, Goldstern placed sixth and Ansbacher placed 23rd in the competition against the NEISC teams.

**Swimmers Fail To Qualify In Easterns**

Backstroke expert Tom Ising, '62, diver Bill Bails, '60, and the medley relay team of Ising, Bunnell West, '62, Tony Silverstich, '61, and captain John Woods, '61, placed among the top eight out of representatives from all schools in the Eastern Swimming Championships at Harvard Saturday. The Beaver tankmen, however, failed to gain a single qualifying point (first through sixth place finishes) in the strong field which shattered or tied seven meet records.

The championship was the second in as many years for head coach Captain Bob Shoemaker, USAF.

Swimmers included a new MIT varsity record.

**SOCIAL DANCING 123-123**

**Leading Questions**

**Professor Dip**

Female reaction to dancing partners using ordinary hair tonics (Text: I'm Dancing With Tears In My Eyes). Female reaction to dancing partners using ‘Vaseline’ Hair Tonic (Text: Waltz Me Around Again, Willie). Universal use of water on hair with drying effects therefrom. Conversely: with ‘Vaseline’ Hair Tonic you can use all the water you want...with neat results. Status of the Male Wallflower at Contemporary Proms discussed in relation to brisipatch hair caused by alcohol tonics. Use of tacky hair creams explored, outlining sticky situations. Emphasis on the one step (the one step necessary to be on the ball of the ball, namely a simple application of ‘Vaseline’ Hair Tonic.)

**Materials:** use & ex. bottle ‘Vaseline’ Hair Tonic

### VASELINE HAIR TONIC

is now available at the TECH COOP

**HE HAS ONE OF THE MOST UNUSUAL JOBS IN BUSINESS TODAY**

He's a computer programmer.

It's a job that didn't even exist until a few years ago. But today it's one of the most important—and certainly most unusual—jobs that a college graduate can do. Data processing systems, with their advanced technologies and tremendous speeds, offer new challenges to college graduates.

It is a field for new ideas, new methods, and new techniques.

**Setting Up The Problem**

A computer programmer analyzes a business, industrial, or scientific problem, and translates it into a language which the computer can "understand." From there the computer goes to work with prodigious speed and accuracy. Often it can solve problems in minutes, which might take days or even weeks, if done by other methods.

The assignments are interesting. IBM programmers have programmed computers to tell businessmen the best locations for new factories; help engineers design electronic circuitry; aid manufacturers in finding the most profitable potential market for new products; work out payroll or quality-control problems at the push of a few buttons; and even analyze how other computer programs should be developed.

**Your Logical Abilities Go To Work**

No previous experience, or even knowledge of the way computers work, is necessary to begin a career as a computer programmer. But you should have the talent and ability to analyze complex problems, to think clearly and to express yourself well. These, plus a college degree with two years of college mathematics, are important prerequisites.

If you qualify as a computer programmer, you will be given an intensive training course in the problem-solving methods of the computer. The salaries are excellent, and your future could be as unlimited as the future of the computer itself. If you think you might be interested in becoming a computer programmer, you can obtain more details from the IBM representative who can be contacted through your College Placement Director.
