Roaring Twenties Epitomized by Student Activities

(Continued from page 12)

were more free autographed photos of famous celebrities, and the "Camp Technology" was used until 1929.

Twentieth-century students would have no trouble finding their way. But even play can have a more constructive side, for while the Techman was helping to pull the rope in the Roaring Twenties, he was also making progress in the field of campus organizations and intercollegiate athletics. The 1919 Field Day featured Al Jolson for entertainment and by the late twenties, the emphasis was on athletic contests for Field Day rather than just all-student free-for-all.

1MX Expanded
1MX, the station of the MIT radio society, expanded by means of some $7,000 worth of equipment. The station was the campus center for the current great interest in radio, besides setting several long-distance transmission records. 1MX was the sponsor of lectures and movies about Radio Technology.

When the Senior Class of 1929 decided to parade through Boston on the day of the Senior Prom, the Senior Class sponsored a neat undergraduate radio station to guide the parade.

Companions were needed, so a powerful 500-watt transmitter was installed on the roof of a dormitory in East Campus in 1926.

“FIND THE ANSWER, JIM—AND BRING IT BACK”

When Jim Boardman took his B.S. in Electrical Engineering at Colorado State, there was one idea uppermost in his mind. He wanted a job in which he could work his way into management via the engineering route. As he puts it, “I didn’t want to stick with straight engineering all my life.”

When Jim Boardman took his B.S. in Electrical Engineering at Colorado State, there was one idea uppermost in his mind. He wanted a job in which he could work his way into management via the engineering route. As he puts it, “I didn’t want to stick with straight engineering all my life.”

After talking to eight other organizations Jim joined the Mountain States Telephone & Telegraph Company. He soon got the kind of action he was looking for.

His first assignment: How best to improve widely scattered rural telephone service all over Colorado—a stickly engineering challenge. He was given a free hand to work out his own procedures. His boss simply said, “Find the answer, Jim—and bring it back.”

Six months later, Jim turned in his recommendations. His plan was accepted.

Next stop: Colorado Springs. Here Jim worked out a plan to expand telephone facilities for this burgeoning community. This plan, too, is now in operation.

Today, at 24, Jim has an important role in planning where, how much, and what kind of telephone service is needed in the Denver area.

Here’s how Jim puts it: “We get tough assignments—but we also have the freedom to take hold and do a job. I think the future here is unlimited. If a man wants to do it—it’s there to be done.”

If you’re a guy who can “Find the answer—and bring it back”—you’ll want to get with a company where you have the chance. Visit your Placement Office for literature and additional information.

BELL TELEPHONE COMPANIES
