Three Hurt In Morning Fire

By Joseph Sullivan
Richard Martin, '62, and Laurence Demick, '63, both members of Sigma Nu, were injured early Monday morning in a fire which

struck the basement of the apartment house in which they were living.

Martin was admitted to Boston City Hospital with a severed artery in his arm. He was listed as in good condition Monday. He put his arm through a plate glass window while facing the blaze.

Demick and Miss Viya Simms were discharged from the hospital after treatment for smoke inhalation. Demick told The Tech that Miss Simms was studying in the living room of their base-

ment apartment when the fire broke out. Both men were asleep at the time of the outbreak, around six a.m.

Fire officials termed the blaze as "suspicious" and said that the arson squad was being called in.

Fake 18.01 Quiz Appears A Day Early

By David VanWerven

Additional security measures may be instituted to protect 32.01 exams, according to Arthur P. Mattuck, professor in charge of freshman calculus.

He made the statement Monday, four days after a mimeo-

graphed sheet appeared in a freshman physics lecture. This sheet, slipped in among 8.01 assignment material at a Thursday afternoon lecture, was denounced as a forgery by the mathematics department immedi-

ately preceding the actual examination on Friday morning.

Optics of the sheet had been wide distribution among freshmen Thursday night, but even then their validity had been questioned because of the number of typo-

graphical errors and mistakes in the general form. Also noted was the lack of material from a sheet of special supplementary homework problems which had been distributed by the math de-

partment during the previous week, and from which it had been announced one of the test questions would be taken.

Several students had called him Thursday night to inform him of the test's existence. Professor Mattuck said he very much doubted the fact that it was not the actual exami-

nation.

Also called was Professor George B. Thomas, Jr., lecturer in the course and author of the text used for 34.01, 35.01, and 36.00.

The test was protected Thursday night by a member of the security force, Professor Thomas stated. This statement was ac-

knowledged by Professor Mattuck, who added that although the sheet had been stolen in the past, they had always been sufficient time to change the examination before its administration, "Maybe as much as a half hour," he said.

Secretariat Conducts Freshman Elections In Physics Sections

Elections for freshman social leaders are taking place all this week.

Sophomore secretariats will conduct the elections which will be held in physics sections. In addition, 8.01, 8.02, and 18.01 are the freshmen.

A plan to recognize the Fresh-

man Council on the basis of the voting groups rather than section representation was shelved by Ins-

pectorate, Professor Thomas.

HUGHES NEEDS YOU!

Five weeks remain in what is probably the most significant political campaign in 1962. Stuart Hughes, (Prof. of history at Harvard) running as an independent candidate for the U. S. Senate against Ted Kennedy and George Lodge, has said:

"I HAVE ENTERED THE RACE FOR THE U. S. SENATE BECAUSE I BELIEVE THAT SOMEONE SHOULD BE TALKING ABOUT THE MAJOR PROBLEM FACING MAN: HIS VERY SURVIVAL."

If you believe that ending the arms race is the most crucial issue of our time, then volunteer your time during the next 5 weeks for:

1) Weekly distribution of 300,000 topical leaflets at factory gates and downtown Boston. (This week's topic: civil rights) Mailed Thursdays.

2) Intensive house-to-house campaigning in selected precincts, done in small teams.

If you are not already working for Hughes, contact:
