A representative of Institute Judicial Committee says the future is in store for many of the students involved in this meeting. This possibility was one of several topics discussed during a meeting October 19 of Institute Judicial Committee. Kenneth W. Allyn, pres. Douglas M. McGregor, chairman of F.C.D., and the other members were as follows:

1. Methods of dealing with unclear infractions—
cases when it was not clear which rule, if any, had been broken.
2. The use of publicity as a punishment for offenses.
3. The problem of communications, primarily between the Dean’s Office and Institute Judicial Committee.
4. Establishment of greater uniformity of rules enforcement within the Interfraternity Conference.

The above statement was made by the F.C.D. chairman, Daniel W. Wadleigh, whose duty is to make clear which rules, if any, will be at the disposal of the Interfraternity Conference.

Using this approach in the F.C.D.’s charter, Dr. F. C. R. Edgerton, who has practiced law in the past, said that students might be interviewed qualified engineers.

STUDENTS AND ENGINEERS,
B.S. degrees or better

As announced in the past few weeks, this Friday night, October 19, Franklin Square House’s annual mixer will be held tonight at the house: 8:30 p.m., 11 East Newton Street, with orchestra music. Admission will be by ticket only, but social chairmen on campus have a rather large supply, get your ticket quickly, as they can be obtained, if at all, only at the door. (NOTE: There is no additional information about the ticket price at this time.)

For the politically minded, the Citizens for Lodge are sponsoring a meeting on the late Senator C. R. Griffin, Friday night, 8:30 p.m. Students from about 20 schools all over Mass. are expected to show up, with Wellesley, Holyoke, and others sending bands. Attendance of 1000 is anticipated. The admission is free, and needels to say that George Color himself will be there to say a few words.

Whitney Memorial Hospital School of Nursing will put on an “Autumn Leaves” mixer on Friday, 8-12, 50¢ donation. It will be at 311 Fremont Avenue in Everett, Mass.

Also on Friday will be a mixer at Margaret Jewell Hall of Mt. Asbury Hospital in Cambridge: 8-12, 50¢ admission, with refreshments. Although it’s being sponsored by the Class of 36 it’s open to all classes. Music will be provided by Mike Zito and his orchestra.

Lesley has finally gotten around to holding a mixer Friday night; for one dollar only, the lucky mixer will treat to four hours (8-12 p.m.) of George Graham’s band music and the company of girls, from the whole campus. It’ll start in the lounge of Tremont. Mauve White House (corner of Everett & Oxford Streets in Cambridge) and probably split out into the court later. Of great interest to many Tech men will be the mixers at OU on this weekend. Tutors, as previously mentioned, will be holding an invitational affair Friday night, 8-12, with music by Janis and free refreshments. Invitations (a limited number) have been sent to Burton, Baker, and Good House, as well as to several fraternities. And a few invitations can still be obtained from the Towers social chairman. Charlies will be throwing a “Castle Caper” the same night, same time. Tipplers are being sent out, and those will give information on how to get invitations. They’ll probably be about the same arrangements as Towers. There’ll be a love (and lively) band, and refreshments will be served.

The activity Friday night will be rounded out by a mixer at Emerson College: 8-12 p.m., on Tremont. The $.99 donation will be distributed among various charities, so give with a smile. Saturday night the main activity will be at Carmichael Hall of Tufts University. It’ll be an all-night affair with music by Bill Nye’s band; guys $1.50, girls free. Sunday afternoon Emerson College will be sponsoring an Open House, 2-5 p.m. Although it’s being held at the women’s residence at 310 Beacon Street, there’ll be girls from the other fraternities, also.

As mentioned previously, Harriet E. Richards House of BU is holding an open house October 27, 8-12 p.m. The address is 35 Bay State Road; all classes will be present, and admission is free.

The above should just be a beginning list of meetings. This time we just sat down and discussed the issues, making no definite decisions.

Monday, November 5

YO CAN TAKE A BIG STEP CLOSER TO YOUR FUTURE

That’s when the Linda Company representative will be on campus. He will be interviewing qualified engineering students who feel their future has not been decided upon.

The Linda Company, for instance—As has been mentioned before (N.Y., Boston [Bedford], Ind., and Newark, N. J.—provides an unusually advantageous environment for the technical-minded to grow and develop.

The main achievements of Linda people in research and applied engineering are many and rich in human progress: Over half of Linda’s current points were off-factory locations. A few years ago the company decided to make the most of their potential and to move to a higher level of efficiency in design. The Linda Company received the 1962 AIA award for Excellence in Architectural Design.

Plan now to save this day for the Linda Company’s representative. He will be in your dormitory at 9 o’clock or 10 o’clock, whichever is closer to your future. Contact the Linda Company placement office for an appointment.

SPACE, MISSILE & JET PROJECTS AT DOUGLAS

have created outstanding career opportunities for

SCIENTISTS AND ENGINEERS,
B.S. degrees or better

Applications include the following areas:

Servo-Mechanisms—relating to all types of control problems
Electronic Systems—relating to all types of guidance, detection, control and communications
Propulsion—relating to fluid mechanics, thermodynamics, dynamics, internal aerodynamics and environmental
—relating to air conditioning, pressurization and oxygen systems
Human Factors—analysis of environment affecting pilot and space crews, design of cockpit consoles, instrument panels and equipment
Heat Transfer—relating to missile and space vehicle structures
Structures—relating to cyclic loads, temperature effects, and the investigation of new materials, methods, products, etc.
Aerodynamics—relating to wind tunnel, research, stability and control
World States Physics—relating to metals and surface fatigue
Space vehicle and weapon system studies—of all types, involving a vast range of scientific and engineering skills
