Completion Of Kresge Dome Uncertain

By Joseph Sullivan

Construction and Physical Plant officials have announced that they will begin work on the dome of Kresge Auditorium this week. With the time zone set to American Time, the dome will be the second one to be built, after the Physical Plant roof over the Kresge Hall.

Six months after the building was completed, the dome's construction will be under way. A new plastic coating proved to be ineffective in preventing rust.

After two years of experimental physical plant experts and representatives of the architectural firm and general contractor decided that lead sheets would provide the best covering.

Last year, the north corner of the dome was covered with a prototype covering. At the same time, the covers facing Rockefeller Park were covered with a type of lead shingles. The paper sheets of lead will be bordered with stained glass on the sides which fuse in the process of being driven into the concrete shell.

A wooden structure will go down through two inches of the outer skin and 3/4 of an inch into the structural slab. An advantage of this cover is that it can be cleaned at any time. It will not be damaged by water, and it will not impair the excellent acoustics in Kresge.

Workmen install lead tiles on the roof of Kresge Auditorium.

A "wet-paper graph" was used, were 363, 512, 457, 454, 465, 504, percentages of the students admitted to the school's average above 400 on the first exam range between 360 and 700, and 16 percent of them were in the bottom two months with favorable weather.

The average CEEB score of everyone freshmen is increasing every year, according to Richard W. Willard, Statistical Analyst for the Freshman Council.

Overall class average this year for all tests is 679, Mr. Willard said, compared to last year's 671.

More students found the test more difficult, he said, with 674, 512, 457, 513, 545, 504, 465, 504, 363, 512, 547, 454, and 363, percentages of the students admitted to the school's average above 400 on the first exam range between 360 and 700, and 16 percent of them were in the bottom two months with favorable weather.
