man was necessary to elicit this
response from the group, and
the chorus from "Surely He Hath
Borne Our Griefs" to the end —
these were in general much bet-
ther than the earlier choruses
We noted intimation problems throughout especially in melo-
dious and a dearth of alto. The
vamp of the final lineg "Bless-
Girding and be Unto Him" was
slower and heavier than usual —
perhaps due to a short prepara-
tion period for this performance
There are several places in
which we must differ with Prof.
Lieplmans concerning his inter-
pretation of slow, dotted rhythmic
patterns, specifically in the open-
ing Large of the overture, and
the trumpet figure in "The Tran-
scendent Soul." If "each little
note is like a tiny diamond," as
Igor Strawsinsky has said, then
these notes must be more dis-

Princeton's Dr. Field Talks
On Jupiter's Radiation Pattern

Jewish education was the subject of a talk by Dr. George Field of Princeton University at last
week's Commiss Seminar.
Field possesses a large radia-
ton pattern similar to our own
Venus belt. It is elongated, ex-
tending to a diameter of three times that of earthly Jupiter.
Field described the current spec-
tations on the makeup of the planet as containing a central core of heavy element to 0.28 radii
and metallic hydrogen to 0.99 radii. From 0.8 to 0.9 radii molecular hydrogen predominates and gases above this give rise to the strict-
avidational appearance. Except for the fed spot and a few other ano-
malies, there are no permanent markings, and the rotational pe-
iod varies with latitude.
The radiation of Jupiter has a periodicity of 9 hr, 15 min, 22.37 sec. It is marked with spe-
tobes and secondary peaks. The work to present to the public.
