The Prudential Tower, currently under construction, will soon be Boston's tallest building. When completed, it will be 70 stories high, and will stand at the corner of Boylston and Huntington Avenues. The building, which will be 752 feet tall, is being constructed by the Prudential Insurance Company of New York, a subsidiary of the Prudential Insurance Company of America.

The tower will have a concrete core and a steel framework, with a glass curtain wall. The glass will be tinted to reduce heat gain, and will be held in place by a system of steel ribs. The building will have 650,000 square feet of office space, 100,000 square feet of retail space, and 8,000 square feet of parking space.

The tower will also feature a rotunda, which will be the highest point in the building. The rotunda will be 300 feet above the ground level, and will be accessible only by elevator. The rotunda will be used for a variety of purposes, including a restaurant, a bar, and a viewing platform.

The building will be completed in 1974, and will serve as a gateway to the city for visitors arriving by train or plane.
