Want IMMEDIATE INVOLVEMENT in projects of significance?

Many engineering and scientific graduates face that as an objective — achieving it is a reality at UAC's Corporate Systems Center.

CSC was formed to bring together under one management the vast technical resources of United Aircraft (one of the nation's forty largest corporations) and its world-famous divisions. A young, relatively small organization, CSC is engaged in all phases of systems work in such diverse fields as stellar inertial guidance, mobile ballistic missiles, weather technology, bio-science systems, orbital rendezvous and satellite navigation and control.

Rapid expansion in programs provides exceptional advancement potential for capable graduates. CSC's "small company" environment coupled with the stability and benefits of a major corporation provide an ideal climate for professional growth.

In the heart of picturesque New England, we are located almost exactly midway between Boston and New York City — only brief hour-and-a-half commute from each.

Professional growth.

Investigate CSC career advantages during our visit. If you are unable to see us, call your Placement Officer for more information and an appointment.
