Foreign Student Report Says School Programs Need Revision

The 28% dropout rate among U.S. foreign students is causing concern among educators. In the past decade, the number has increased by 75 per cent, and on the basis of the present trend, the number will exceed 100,000 in another 10 years.

This passage, from the report of the Committee on the Foreign Student in American Colleges and Universities, urges the need to improve foreign student programs.

The report says schools must recognize the significance of foreign students as basic and essential parts of their educational mission. Closer cooperation between academic advising and personal counseling must be established, the report states.

Admission policies should be revised to put emphasis on admitting those students whose basic objectives can best be served. One consideration for admission, the Committee concludes, should be the candidate's potential contributions to their country's development.

Orientation programs for foreign students must not only help the student master the details of living on the American campus, but must also look to the long-range objective of exposing the student to American life to give him an understanding of social and political institutions.

College World

SINA President Is Coming To MIT;
May Start Chapter To Fight Nudity

SINA is coming! The Tech has been informed that G. Clifford Prout, SINA president, will be coming to MIT this month to organize a student chapter.

What is SINA? Nothing else but the Society for Ensurance to Naked Animals. The objective of the society is to "protect our children from the sight of naked animals, cows, dogs, and cats."

The idea of founding SINA was conceived in 1962 when MIT students noted "the prevalence of naked animals on campus."

Prout immediately began writing for animal clothing. At first, people turned a deaf ear to his pleas. "I was told that a mission could not be repressed within 10 years and that it had to be used for "improving the moral climate of this institution."

But Prout stubbornly refused to accept defeat. "In 1963, I received a summons from a mounted policeman for speaking in New York's Central Park without a permit. "I retaliated," said Prout, "by giving the cops a SINA specimen for contributing to the deliquency of his home."

Prout believes that all animals have a basic sense of modesty, and that they prefer to wear clothing. However, he cannot define a case of "animal nudity," he sends a letter to the offending person.

In 1963 he wrote to Northwest Orient Airlines protesting the appearance of a naked horse in the airline's show window in New York.

David Anderson, board chairman of RCA, received a letter in June from Prout, pointing out that RCA's trademark - a dog named Nipper - was impropriety.

A Disaster Area

In addition to his letter-writing campaign, Prout personally travels to cities throughout the United States in order to further his clothing-for-animals drive.

San Francisco was the site of one of his visits last August. "San Francisco is a disaster area," Prout declared. "There are over 700,000 naked animals running around loose."

"There's a definite correlation between this animal nakedness and the city's high rate of alcoholism and suicide. The sight of so many naked animals also helps to explain why there is so much juvenile delinquency and adult crime."

Prout claims that his campaign has just begun. "We now have 40,000 members from coast to coast and a Washington lobby to influence animal legislation."

"We distribute flyers for animal clothing through the mail, and SINA has 14 agents, distributing clothing to animals around the U.S. ready to rush to any areas where animal nudity is a problem."

And G. Clifford Prout is planning to visit MIT this month.

Riflemen Down BU; Place Fourth, Sixth In NRA Tournament

Captain Dick Ludeman '63 oversaw the team with 288 in Friday's dual meet. He was given creditable support by Joe Dowdall '63, 291; Jerry Skinner '63, 291; Bruce Peterson '63, 284; and Dave Hamada, 285.

15 beating 4 each participated in Saturday's tourney, and Northeastorn won with 1194. MIT won 4 with a 1232 aggregate. Downwood 3rd 269; Lewiston, 253; Skinner, 260; and Joe Boles, 248.

The B team was led by a shooting manager with 283. Peter- son and Karl Fredericks '63 tied with 731, while Hamada shot 285, for an aggregate of 1133 and 6th place.

Fresh Baseball Practice

Set For Tues., March 11

The first practice for the freshman baseball squad is set for Tuesday, March 11 at 4:00 p.m., in the armory. All interested are invited to attend.

Pratt & Whitney Aircraft

AT PRATT & WHITNEY AIRCRAFT...

YOUR EYES CAN BE ON THE STARS
 BUT YOUR FEET MUST BE ON THE GROUND

The glimmer and excitement of space age programs often obscure a fundamental fact. It is simply that faint sightedness must be coupled with sound, practical, down-to-earth engineering if goals are to be attained. This is the philosophy upon which Pratt & Whitney Aircraft's position as a world leader in flight propulsion systems has been built.

Almost four decades of solid engineering achievement at Pratt & Whitney Aircraft can be credited to management's conviction that basic and applied research is essential to healthy progress. In addition to concentrated research and development efforts on advanced gas turbine and rocket engines, new and exciting effects are being explored in every field of aerospace, marine and industrial power application.

The challenge of the future is indicated by current programs. Presently Pratt & Whitney Aircraft is exploring the areas of technical knowledge in magnetohydrodynamics . . . thermonic and thermo-electric conversions . . . hypersonic propulsion . . . fuel cells and nuclear power.

If you have interests in common with us, if you look to the future but desire to take a down-to-earth approach to get there, investigate career opportunities at Pratt & Whitney Aircraft.

To help move tomorrow closer to today, we continually seek ambitious young engineers and scientists. Your degree? It may be B.S., B.Eng., A.M. or Ph.D. in MECHANICAL, AERONAUTICAL, ELECTRICAL and NUCLEAR ENGINEERING . PHYSICS . CHEMISTRY . CERAMICS . METALLURGY . CHEMICAL and ENGINEERING SCIENCE - APPLIED PHYSICS. The field still broadens. The challenge grows greater. And a future of recognition and advancement may be here for you.

For further information regarding an engineering career at Pratt & Whitney Aircraft, consult your college placement officer or write to Mr. William L. Stoner, Engineering Department, Pratt & Whitney Aircraft, East Hartford, Connecticut.
