Mayflower II designer now heads Francis R. Hart Nautical Museum

William Avery Baker, designer of the Mayflower II, the new vessel for the Francis Russell Hart Nautical Museum. Mayflower II, built in England, was sailed to the United States. In all her travels she now is permanently moored in Plymouth, Mass. Baker is a recognized authority on ships of the 17th and 18th centuries. He has been a consultant to the Massachusetts Maritime Academy and the City of Salem, and now is consulting with the National Geographic Society.

He has written numerous articles and two books on ships of the period. He serves as consultant to the National Geographic Society.

Mr. Baker is a graduate of the Department of Naval Architecture and Marine Engineering at MIT. He is also employed as a supervising engineer with the Northwestern Division of Bethlehem Steel in Quincy, Mass.

Mr. Baker, and his wife, Ruth, live at 10 Rice Road in Hingham, Massachusetts.

Oora Medal from King Haakon of Norway

At present he is engaged in a project to design the Northwest Passage for ships in general. He received a medal from King Haakon of Norway in 1958 for his work in the Northwest Passage project.

2nd team Joes, 36-0

By Richard Johnston

The MIT Rugby team met its first really stiff opposition Saturday when it lost 36-0 to the Boston Rugby Club at their new field between Mass. General Hospital and the river. Tech also was defeated 36-0 in a second-team game at Briggs Field.

Boston Rugby Tech

The first game was played under very unusual conditions as the general drought had reduced the surface of the field to dirt and it was often impossible to follow the ball in the smelly.

In the first half MIT was outscored by the quick handling and running of the Boston team. Two quick tries and a long penalty goal put Boston 5 up before MIT gathered themselves up to stop the run. The Boston team was kept out until just before the halftime whistle when they touched another try which was converted to give them a 14-0 half-time lead.

Boston Scores Twelve

The second half showed a much improved MIT team. The scores with a greater push got the ball from the majority of the scrums and the three-quarters' covering and tackling became more determined. From the half-time MIT got their fair share of the ball and the final score showed this to advantage as Boston was very quick to break through the line and when Marty Weber, the MIT scrum half, missed the second try, the Boston team scored again.

After several promising attacks Boston reduced Boston's lead through two tries at identical intervals. The first came from Garrett Garris, playing his first season of rugby, broke thru several half-backs to score in the eight hand.

The second team game which was played at MIT was in some ways similar to the first. This was the first game of the season for the teams and injuries led to some substitutions. The second half saw Boston score points without reply.

Intramural wrestlers to grapple

Intramural matches will come in for both personal and house titles this week and Saturday. Last year over 100 participants, competing for 24 teams, wrestled some 150 who were involved in the wrestling and boxing rooms in Dupont Athletic Center.

The wrestlers this year will be divided into eight weight classes, the two classes of last year's nine being combined to increase competition in that league.

The weight classes will be 130, 133, 136, 140, 147, 157, 165, and 177.

Skaters out early at Harvard rink

Varsity hockey practices have been held at Harvard's rink for the past two weeks to give the team more practice and a jump on the competition. So far the practices have been most successful and the team looks forward to the season with enthusiasm.

The roster shows seven returning lettermen, eleven from last year's nine being combined to increase competition in that league. The weight classes will be 130, 133, 136, 140, 147, 157, 165, and 177.

AN OPPORTUNITY TO GROW

IN THE HIGHEST PROFESSIONAL WORKING ENVIRONMENT

ELECTRICAL ENGINEERS

PHYSICISTS

MATHEMATICIANS

Technical representatives of the MITRE Corporation will be conducting interviews on campus November 8, 1963

MITRE designs and develops systems that enable our military commanders to detect enemy forces from the air and predict their actions. Our clients are the Department of the Army, the Department of the Navy, the Department of the Air Force and the National Aeronautics and Space Administration.

You work in an atmosphere that allows you to extend your capabilities professionally and academically.

For the young systems engineer there is no more rewarding job than the work of new system development. You may analyze. You may synthesize. You may design.

You may work in such diverse areas as computer design, display techniques, propagation, or human engineering. You may analyze. You may synthesize. You may design.

The key to system design is the concept. Systems engineers work with you to extend your capabilities professionally and academically.

MITRE is located in the metropolitan Boston area, and has facilities in Washington, D.C. and Colorado Springs.

If an interview will be inconvenient, inquiries may be directed in confidence to the Personnel Director, MITRE Corporation, Box 208, Dept C65, Bedford, Mass.
