Extension Being Built Along Track

By Dick Schmalensee

A direct route west from downtown Boston will be provided by the Boston extension of the Massachusetts Turnpike. The multi-lane highway will create 34 miles of no-stop-light right-of-way from South Station to Route 28. The extension is being built on the roadbed of the New York Central Railroad, purchased last spring for $34 million. The railroad will retain two tracks parallel to the turnpike; but shifting present tracks to make room for the extension will add another $4.5 million to total costs.

To allow the existing right-of-way, a great deal of adjusting property-$53 million worth—is being torn down. The switching at Bostie Street near Massachusetts Avenue represented only a small portion of this expense.

1700 Feet Tunnel

The closest interchange to MIT will be at Mass. Ave. and Boylston Street, where cars from Mass. Ave. may go west on the turnpike. The Tunnel Authority says it estimates that the vehicles daily will be 78,000 when the road is completed. By that time, the tunnel is expected to help cut our

College World

Have you ever wondered why Caltech doesn't admit coeds as undergraduates? Well, our MIT coeds are responsible for this.

According to the California Tech, several years ago Caltech actually did consider admitting women graduates and at that time did make an available amount of research on the subject. The major sources for this story were the MIT records, which MIT opened completely to Caltech officials. MIT was chosen because it was considered the most comparable school to Caltech in the United States.

The story showed that a large percentage of women who received their undergraduate degrees got married soon afterwards and did pursued a career related to their degrees. Because a great proportion of educational funds come from outside sources, Caltech decided it would be wise to refuse admission to women, who would not “waste” Caltech's resources by pursuing non-technical goals.

There were also other points that were considered in the decision. One of these is that a woman who received a degree in a male-dominated field would be in a male-dominated field. Because a great proportion of educational funds come from outside sources, Caltech decided it would be wise to refuse admission to women, who would not “waste” Caltech's resources by pursuing non-technical goals.

The latest position to be filled by a woman is that of assistant director of projects at Wesleyan's College of Quantitative Studies. The appointee is Muguette Fabris, formerly instructor of mathematics and French. At the age of 22, she has just been chosen Miss France. The Middlesex Press reported that Robert Rosenthal, Wesleyan Argus reporter, said that she is a no ordinary run-of-the-mill math instructor. At the age of 22, she has just been chosen Miss France.
