**Tours also offered**

**Management will give panel talk**

The School of Industrial Management has two alumni to assist men to prepare themselves for future businesses. The management plan will highlight the computer center, the human behavior laboratory, the work study center, and a model of the proposed management center. The school will present a panel discussion on "Human Behavior in Management." Six students, led by Prof. Douglas McGregor, will discuss the importance of applying computer science to the complex world of industrial technology.

**Air currents, radar shown by Meteorology**

The Department of Meteorology seeks to educate and re-entice the world of both the students of our atmosphere as well as the scientists. Studies of the internal mechanisms of our atmosphere address the need for a better understanding of the earth and its processes. The earth and other planets will be shown in the Hayden Library near the Art Gallery.

In addition, the department admissions office will be shown in the Hayden Library near the Art Gallery. At 2:30 pm, a program will be given in the Hayden Library's lounge. This program will cover a sharp exploration of the "Contributions of the Hu-

**Humanities Dept. will give forum**

In its determination to achieve a well-balanced education for all its students, the Humanities Department provides courses in literature, history, music, and dance. In addition, the department admissions office will be shown in the Hayden Library near the Art Gallery.

**New housing units will open next fall**

As part of the Second Century Program, two new housing units are under construction. The new residence for women, on Memorial Drive overlooking the Charles River, will be completed by a gift from Mrs. Stanley McCormick of Bos-

**Nutrition and Food Science to show food poisons**

Nutrition and Food Science to show food poisons. Food will be displayed in Room 238. This will show that food poisons are a serious problem and that they can be identified and controlled.

**Dehydration technique**

A fermentation setup for indus-

trial microbiological systems will also be on display, along with an exhibit on flavor analysis.

The human-food chemistry and physi-

ological-chemistry activities of the department will be on display in Room 134. Exhibits on the nutritional aspects of physical activity will be shown in Room 238. A number of ex-

dhibits dealing with biochemical engineering will be shown. A continuous culture and growth experiment with algae has been con-

cstructed. It is a laboratory scale model of a pilot plant for utilizing the potential of algae as a food source.

**Tours to be guided through nuclear reactor facilities**

The Department of Nuclear En-

engineering carries out a program of teaching and research directed toward the development of new nuclear energy for the use of man. Nuclear engineering is a highly specialized field which requires considerable knowledge of many other fields, such as mechanical, electrical, and chemical engineering; physics; and mathematics.

The nuclear reactor, on Vassar street, will be shown in Room 238. It will be open all day and tours will be guided.
