The Department of Architecture will hold its Open House for freshmen and sophomores on Wednesday, March 11, in the Emerson Room, 7-400, at 4:00 p.m. The meeting will afford those attending a first-hand look at undergraduate opportunities in Course IV and a chance to discuss the curriculum with leading professors and upperclassmen in the department.

Architecture at MIT seeks to combine artistic imagination with sound structural technology. The five-year undergraduate professional course leads to the degree of Bachelor in Architecture. It combines a program of general education emphasizing science, mathematics, and the humanities with a program of departmental and basic engineering studies designed to provide a general but thorough introduction to architecture. Supplemented by practical experience, this five-year program provides preparation for independent practice.

Required departmental courses include 2.761 and 2.792 Architectural Geometry; 4.012 and 4.022 Form and Design; 4.44 Light and Color; a sequence of courses in Architectural Design; a sequence of courses in Structures; and a sequence of courses in the history of architecture. An eight-hour thesis is also required at the end of the final year.

Architecture Department to describe curriculum at open house for freshmen and sophomores

The Bell Telephone Companies Salute: Dick Knorr

It takes 37 craft employees, 4 foremen, and 2 clerks to maintain high-quality telephone service in Pittsfield, Mass. And the entire management responsibility for this team and their work rests with New England Telephone’s Outside Wire Chief, Dick Knorr.

Dick (B.S.C.E., 1957) joined the company in 1962 and, in less than a year, rose to Outside Wire Chief.

How Dick handled his earlier assignments certainly speeded his promotion. For instance, the professional job he did as Wire Chief in North Adams, the precise work load forecasts he made in Pittsfield, the thorough way he scheduled work while Control Board Foreman in Pittsfield.

When his latest opportunity came, Dick’s experience and demonstrated ability caught it!

Dick Knorr, like many young engineers, is impatient to make things happen for his company and himself. There are few places where such restlessness is more welcomed or rewarded than in the fast-growing telephone business.
