Psychology becomes Course IX

The Psychology Department is at an exciting moment in its development, as President William N. Locke, a former instructor in the department, has announced the merger of the Psychology Department with the Biology Department, which will result in the establishment of a new Department of Behavioral Sciences. This merger is expected to enhance the department's research and teaching capabilities, and to provide opportunities for interdisciplinary collaboration.

The new department will be directed by Dr. Norbert Wiener, the renowned mathematician and cybernetics pioneer. Dr. Wiener, who has made significant contributions to the fields of mathematics and computer science, will bring a wealth of expertise and experience to the new department.

In his inaugural address, Dr. Wiener emphasized the importance of interdisciplinary research and the need for a more holistic approach to the study of human behavior. He also announced plans for the expansion of the department's facilities, including the construction of a new research building.

The merger is expected to have a significant impact on the student body, as the new department will offer a wide range of courses in the behavioral sciences. Students will have the opportunity to pursue interdisciplinary coursework and research, and to work closely with faculty members from multiple disciplines.

The merger also marks a significant milestone in the history of the department, as it represents a major step forward in the integration of the behavioral sciences at MIT. The department is committed to fostering a collaborative and dynamic environment that will prepare students for leadership roles in the field of behavioral sciences.

In conclusion, the merger of the Psychology and Biology Departments represents a significant step forward for the department, and the entire MIT community is excited about the future of the new Department of Behavioral Sciences.

Dr. Norbert Wiener died last Wednesday

Dr. Norbert Wiener, a leading mathematician and cybernetics pioneer, passed away last Wednesday. Dr. Wiener was a pioneer in the field of cybernetics, and his contributions have had a profound impact on the development of computer science and artificial intelligence.

Dr. Wiener was born in 1894 in Stockholm, Sweden, and he spent his early years in the city. He received a BA in mathematics from the University of Uppsala in 1912, and a PhD in mathematics from the University of Göttingen in 1915.

Dr. Wiener was a member of the Institute for Advanced Study in Princeton from 1937 to 1947, and he was a professor at the Massachusetts Institute of Technology from 1947 to 1966. He received numerous awards and honors throughout his career, including the National Medal of Science and the IEEE Centennial Medal.

Dr. Wiener is survived by his wife, Ida, and his daughter, Helene. The family requests that contributions be made to the Wiener Foundation, which supports research in mathematics and computer science.

The MIT community is preparing to honor Dr. Wiener's legacy this week, with a series of lectures and discussions on his work and its impact on the field of computer science.

The family requests that contributions be made to the Wiener Foundation, which supports research in mathematics and computer science.
