Eastman Kodak grants $44,000

MIT has received grants totaling $44,000 from Eastman Kodak under its agreement for educational programs for 1964. The Kodak contribution includes an unrestricted grant of $6,000 and three research grants of $12,500 each.

Committee elections for Spring Weekend

Spring Weekend is scheduled for April 3, 1965, this year. A special meeting of the Student Center Committee will report to the Institute Committee before the Institute Committee as a whole committee for the event will be elected within the next three weeks. Candidates will probably be reviewed by the Inscomm Executive Committee, 50-110.

Committee elections for Spring Weekend

Interested students may consult Betty Hendricks in Litchfield Lounge, 50-110.

New ROTC bill has scholarships

(Continued from Page 1)

The Army has not planned quite as thoroughly as the Air Force, he stated, because of the changes wrought in the bill by Congress, and has adopted a "wait-and-see" attitude. Of perhaps more importance, he said, will be the results of studies currently going on relating to the content of the Army ROTC curriculum.

As a personal recommendation, Gilland stated, he would suggest that the Army ROTC department adopt both the two-and four-year plans concurrently. Whether the scholarship program is instituted or not, he stated, depends on whether the Institute accepts the program.

The Navy ROTC program would not be significantly altered, according to Capt. Harry M. Pugh, since the Navy Dept. already has a program similar to the one in the new bill. Called the Hydrographic program, it is not used at MIT. MIT's programs, according to Pugh, is unique in all Naval ROTC programs in that sophomores and juniors spend only a week in class, and thus have only about half as much instruction time as students in other schools' programs.

Freshmen who wish to benefit from this bill must apply the ROTC program, according to all three department heads. The scholarship programs will go into effect completely next September.

The Color TV market is in full bloom—and GTE along with it. The reason? Our Sylvania subsidiary has made dramatic advancements in the performance standards of color TV sets.

In developing these new receivers, Sylvania drew upon the vast resources of facilities of GTE. The result: Sylvania "Color Bright 85" picture tube using a revolutionary new red phosphor that increases brightness by 43 percent over the industry standard. Our Sylvania Electronic Components Group is one of the two largest suppliers of Picture tubes... used by 7 out of 10 TV set makers.

As a major factor in all phases of communication through sight and sound, it is not surprising to see 45, chairman of the Committee, that the meeting would be a fair appraisal of these needs be obtain by the Committee.

Members of the Committee will represent MIT at the New England conventions of the Association of College Unions, to be held October 16 and 17 at the University of Bridgeport. Systems of student government that have been successful by other schools in operation of student centers will be studied.

Future work of the Committee is to be directed toward publicity, organization of a plan for government of the center in cooperation with the Institute Committee, and final allocation and distribution of equipment and employment to the activity offices on the fourth floor. Recently announced or confirmed facilities in the center include:

Five pool tables and eight lanes of tenpin bowling in the basement; a U.S. Post Office (Technology Center); a full-service library with 20,000 square feet of floor area; a seminar room; six music practice rooms; a 15,000 reserve book reading room on the fourth floor, duplicating current facilities in the Science Library and Reserve Reading Room; a foreign periodicals browsing library.

It is reported that the Institute has expressed interest in maintaining this library if demand is sufficient. The entire building has central heating and air conditioning. There is a piped music system for the dining rooms and for the radishes in the restaurant.

Our ROTC program, according to all three department heads, involves a "wait-and-see" attitude. Of perhaps more importance, he said, will be the results of studies currently going on relating to the content of the Army ROTC curriculum.

As a personal recommendation, Gilland stated, he would suggest that the Army ROTC department adopt both the two- and four-year plans concurrently. Whether the scholarship program is instituted or not, he stated, depends on whether the Institute accepts the program.

The Navy ROTC program would not be significantly altered, according to Capt. Harry M. Pugh, since the Navy Dept. already has a program similar to the one in the new bill. Called the Hydrographic program, it is not used at MIT. MIT's programs, according to Pugh, is unique in all Naval ROTC programs in that sophomores and juniors spend only a week in class, and thus have only about half as much instruction time as students in other schools' programs.
