LBJ polls 51% of student vote

President Johnson emerged as the choice of the MIT community in the presidential straw vote held by the MIT Student Senate yesterday. With 2,273 undergraduates voting, 1,113 votes (or 51.3% of the total undergraduate vote) went to Johnson. Senator Goldwater received 477 votes for the remaining 48.7%.

The straw vote allowed the full spectrum of student political organizations to indulge in spirited competition for the votes of the student body. The lobby of Building 10 was the scene of considerable student political activity with all factions maneuvering to distribute campaign propaganda. The results of the straw vote may be compared with that taken October 23, 1968 at Harvard where President Johnson received 86.1 per cent of the vote compared to Senator Goldwater's 13.9 per cent. At the same time Radcliffe gave Johnson 85.1 per cent of the total vote.

The Committee on Educational Policy has released its report on the Student Senate yesterday. The survey was conducted to obtain more knowledge of the problems arising from demands on faculty time; of special emphasis was the amount of time devoted by faculty members to teaching duties versus research and consultation.

The questionnaire was mailed to the 76 full-time members of the faculty; 26, or 34%, completed and returned the form. All returns were completely anonymous; a profile reveals 39 per cent full professors, 20 per cent assistant professors, 18 per cent associate professors, and 6 per cent lecturers, excelled faculty members, and humanities instructors.

The report reveals that the MIT faculty is young (average 39 years), rapidly growing (median 5 years on the faculty and 3 years in present rank), and well educated.

This is the final year you can make the choice available now for the 1964-65 election. The Republican vice-presidential candidate, very soon we may have gone too far down the line on the socialism. Lally Miller was the featured speaker at a rally sponsored by the Republican Campaign Coalition at MIT held last Thursday. The speaker's comments at the meeting were Jack Mowskies, House Speaker John B. Anderson, and Raymond Franzese, candidate for the state legislature from Cambridge.

Miller told the quiet crowd of 100 that "We've been very happy with this candidate. I don't think much of young people that are dedicated to and excited about Barry Goldwater this year. They are concerned because they know that the future is theirs, and they don't want to be burdened by the mistakes of an unhinged government."

The American Council of the Stu-

dent Senate's report recommends that the main issues of the campaign be Student Power, and how we want to live in the world, and the leaders have an obligation in the government's faith in what the American people can do for their own self-interest and the people in their reach and connect with the need that a balance in their reach and connect with the need for Americans and their government.

Molsworth, a political veteran, is unhappy with the trend, saying that, "the result is that they don't want to be burdened by the mistakes of an unhinged government."

A Symposium on American Women in Sciences and Engineering was sponsored by the Association of Women Students at MIT on October 23. It brought together a group of qualified individuals and women for the personal, social, and professional growth of those interested in a commitment to a profession in science and engineering.

The series of addresses and panel discussions was on the following subjects: October 23, in Kresge Auditorium - "The status of women in the engineering professions" and "Scientific problems and opportunities facing women." October 24, in Kresge Auditorium - "Women in the engineering professions" and "The status of women in the engineering professions." Two additional sessions were held on October 23 and 24 at the homes of members.

Rebecca Woodson

The meeting was declared to be a success by President Strachan quickly after the meeting adjourned. In a private conversation with The Tech, Strachan praised the meeting for the interest that it generated among the participants as well as the general public.
