railroad air rights sought

The Institute is actively negotiating with the New York Central Railroad for air rights above the Grand Junction tracks that run along the present routes. A railroad official told the Boston press last week that consummation of the sale was imminent. Ownership of the air rights would allow MIT to build above the tracks, with a minimum 25 feet clearance. The tracks and associated right-of-way are 85 feet wide.

The railroad official stated that the deal, which would cost more than $1 million.

Currently, the Institute has no definite plans for construction above the tracks, but Treasurer Joseph S. Snyder, commented that "the cost of maintaining a little-used facility of this size could not be justified in view of the pressing needs of the educational program in the Institute." In recent years the property and equipment at Round Hill has been assessed by the Institute at $75,100.

MIT to continue limited program for special Harvard course study

MIT is continuing its limited experimental program with Harvard through which certain undergraduates may take an undergraduate subject at Harvard, receive credits towards their degree at MIT, and incur no additional financial costs.

Students desiring to follow this program may apply directly by sending their applications with an overall record equal to a minimum of 4.5 or over from Kresge at X2910. Acceptance as a registrant, and he must provide the faculty with the necessary evidence of the student's proficiency in the subject.

If requirements are met, the student obtains from the Harvard registrar a letter stating that he or she is in the line of study leading to the degree.

Dec. 18: last day for dropping subjects

The Registrar's Office has announced that Friday, December 18, will be the last day in the fall term that subjects may be dropped with only advisor's approval.

Seven appointed to faculty

Captain Leehey was a naval officer and official of the New York Central Railroad. He has been named the first Sedgwick Professor. Dr. Luria has gained in importance in recent years as the head of the MIT biology department.

Luria lecture gives reasons for progress of Communist Party

Dr. Dr. John W. Cahn has been named professor of metallurgy. Captain Patrick L. Leehey has been named an associate professor in the Departments of Mechanical Engineering and Naval Architecture, and Dr. Morton Gordon, Dr. Wilbur D. Johnstone, Dr. Stephen Margolin, and Dr. Karl Shull in, have all been appointed to the faculty.

Dr. Louis E. Luria, a member of the faculty since 1958, has been named to an associate professor in the Departments of Mechanical Engineering and Naval Architecture.

The late Dr. Sedgwick became the first head of MIT's biology department.
