VOYAGE TO THE BOTTOM OF THE BARREL

As everyone knows, thousands of fathoms of the earth's surface is water. Thus we can see how important it is to know and understand our oceans. Towards this end American colleges last year enrolled in a program to increase enrollment in oceanography. I am pleased to report that results were nothing short of spectacular.

In one single semester the number of students enrolling in oceanography rose by 100%—from one student to two! But more oceanographers are still needed, and so today this column, normally a vehicle for slapstick and satire, will instead devote itself to a brief course in oceanography. In view of the solemnity of the subject matter, my sponsoress, the Personna Stainless Steel Razor Blade Co., makers of Personna Stainless Steel Razer Blades which give you more luxury shaves than Deep-Beep or any other brand—by my count, the makers of Personna Stainless Steel Razor Blades will buy you a pack of whatever brand you think is better—my sponsoress, I say, the Personna Stainless Steel Razer Blade Co. will today, because of the solemnity of this column, forego their usual commercial messages.

We begin our study of oceans with that ever-present favorite, the Pacific. Largest of all oceans, the Pacific was discovered by Balboa, a Spanish explorer of great vision. To give you an idea of Balboa's vision, he first saw the Pacific while standing on a peak in Darien. The Pacific is not only the largest ocean, but the deepest. The oceanography rose by 100%—from one student to two! Looking Back

Appeal to Blackboard Hiding Janitors

By Bob Horvitz

To Teachers

It is probably nothing but excessive-ness that causes the janitor to leave the blackboards hidden behind the pillars in Rogers' cor-ner where he has placed them. How this is, however, a serious cause of annoyance to the students, and an undeniably the indirect reason for so many poorly attended meetings. We must just tell the janitor that he should have us in mind in future, and would also appreciate it if we could place bulletins in the place in question, that at about ten o'clock (the time of sweeping) they take a turn in Rogers and see that their notice is where it should be, and not in that most unattainable place behind the pillars.

The brass rail is back in front of the cage. It is now well placed through the floor, so that over-enthusiastic Freshmen cannot carry it away.

To Students

The little red and gray Techno- nology buttons are an excellent thing in themselves, but some room don't seem to take sufficient pride in what they represent to those who are about to run them. We realize that they soil easily and are not adapted to eanning, but little bit of oven powder and soap and water or gasoline, will do wonders. Also, in desperate cases, fifteen cents will purchase a new one.
