The Tech

F0llows Stever Shapiro named Head

Professor Hans Mueller was in charge of many of these departments. Prof. Mueller was born on October 7, 1906, in Aarau, Switzerland. He received his diploma in science and mathematics in 1933 from the Eidgenossische Technische Hochschule in Zurich. He came to MIT as a research associate in the Department of Physics in 1935, was made an assistant professor in 1935, and professor in 1942. He served to the Institute was continuous except for the academic year 1937-38, when he was on leave as a Guggenheim Fellow at the Cavendish Laboratory in Cambridge, England.

Field of optics

In his field of optics, Prof. Mueller had made numerous significant contributions. During the past two years he and his colleagues have been conducting research on the interaction between short-wavelength photons and the electronic and atomic structure of solids.

In his field of optics, Dr. Mattfeld has been working with the physical properties of semiconductors, particularly in the area of solid-state physics. He has been collaborating with other researchers on the study of photomixing and the photovoltaic effect, and the cooling of colloids was of basic importance.

GM gives $1,000,000 for highway safety study

By Dan Adomov

General Motors has given MIT a $1,000,000 grant over four years to study methods of improving highway safety. Past efforts at this sort of work have concentrated on one facet of the highway problem, usually the attempt to cut off all risks of high speed traffic, but in recent years, a variety of ways of determining causes of accidents and other traffic problems have been devised and evaluation solutions to these problems.

One part of the study might be given more knowledge of the causes of accident, traffic police, the National Highway Safety Administration, the National Transportation Safety Board, the American Association of Central Chemists.

Professor Hans Mueller died in 1959.

As of late Wednesday afternoon, 346 of the 632 freshmen that registered for registration. This represents 40.1 percent of the total number of freshmen. The previous record was 360 in 1963.

The computer complex to be installed by the end of this year will be used for time-sharing. The computer complex will be named the Shapiro complex.

The Model 40 is the fourth computer to be named after a MIT professor. The previous computers were named after Professors Hans Mueller, J. Robert Oppenheimer, and Charles W. Kettering.

Dr. Mueller was professor of physics at MIT for 25 years. He was a member of the National Academy of Sciences, Sigma Xi, and the American Physical Society.

Dr. Mueller's work in the field of high-speed computing and the study of the photoelectric effect led to the development of the first high-speed computing machine in the world. He is credited with the development of the first electronic computer, the ENIAC, which was used to calculate firing tables for the United States Army during World War II.

Dr. Mueller's work also contributed to the development of the first practical computer, the IBM 701, which was used to calculate firing tables for the United States Navy during World War II.

In addition to his work in the field of high-speed computing, Dr. Mueller was also a member of the National Academy of Sciences, Sigma Xi, and the American Physical Society.

The new computer, an IBM 360 Model 40, will be used for time-sharing.
