Student Center dedication

This Saturday the MIT Student Center will be dedicated. The ceremonies will last only thirty minutes. These brief minutes will be made up of many, many speeches of administration cooperation.

That day a perspective of the building's past and future will be offered to the students of today. The men who have made the building possible are there—Dr. Stratton, whose persistence and foresight turned a dream into reality; Dean Emeritus John T. Rule, founder of the first faculty committee, and Dean Robert Holden, its first chairman; past chairmen of the Student Center Committee since 1933—the list is a long and distinguished one.

For these men, the day will be one of satisfaction and fulfillment. For the students, it will be a day of joy and fun. For the Faculty, it is only cold concrete.

It is only cold concrete.

Dr. Stratton, whose persistence and foresight turned a dream into reality; the men who have made the building possible are there—Dr. Stratton, whose persistence and foresight turned a dream into reality; Dean Emeritus John T. For these men, the day will be one of satisfaction and fulfillment. For the students, it will be a day of joy and fun. For the Faculty, it is only cold concrete.

The dedication looks to this uncompleted work as well. Its organization by students, and the guidance and direction of its administration, are prophetic. The tribute of the building for Dr. Stratton recognizes a goal he has set for it—a creation of "a student environment for which we have been striving." The building needs to be used; until the spirit of the campus penetrates it, it is only cold concrete.

Grading system

MIT has undoubtedly-raised ahead of many universities with its curriculum changes; and yet, it seems there is a need for the unification and organization of grading systems, to avoid the creation of "a student environment for which we have been striving." The building needs to be used; until the spirit of the campus penetrates it, it is only cold concrete.
