"Twenty Chimneys" wins grille room naming contest

By Ted Nygren
Meeting last week, the Student Committee on Environment approved "Twenty Chimneys" from among the choices for the name of the new principal residence hall.

The committee members more seriously considered when deciding the name, the most important aspects were the architectural style and design and the name's appropriateness. While every college campus has a unique look, the student committee considered whether the name would match the look and feel of the building.

Chatham Cooke

Chatham Cooke, a first-year student, was named the winner of the grille room naming contest. "Twenty Chimneys" is the name for a room on the second floor of the building. It will be adorned with a large, three-dimensional sign that reads "Twenty Chimneys." The sign will be placed above the entrance to the room.

Richard L. Kauffman, Chairman of the Student Committee on Environment, said that the name "Twenty Chimneys" was chosen because it reflects the architectural style of the building and its location on the Cambridge campus. "The name is fitting because it is associated with the building's design and location," he said.

The committee also considered other names, such as "The Grille Room," "The Dining Room," and "The Pizza Parlor," but ultimately agreed on "Twenty Chimneys" as the most appropriate.

The name was chosen from a list of over 100 suggestions submitted by students. The committee reviewed each suggestion and narrowed it down to a final three. The final decision was made by the committee members in a vote.

The grille room will be located on the second floor of the new residence hall and will be open to all students. It will serve as a place for students to gather and relax, as well as a venue for social events and activities.

Beadle to speak at Whitaker Building dedication

By John Currie
The Whitaker Building for the biological sciences will have its dedication Friday afternoon at 3 in the auditorium. The dedication speaker for the $8.5 million, 200,000-square-foot building will be Dr. Beadle, a Nobel laureate and former president of the University of Chicago.

Dr. Beadle, a biochemist, has made significant contributions to the field of genetics. He is best known for his research on the genetics of the fruit fly and his development of the technique of chromosome manipulation. In 1945, he was awarded the Nobel Prize in Physiology or Medicine for his work on the genetics of fruit flies.

The dedication speech will be followed by a tour of the building and a reception in the new facilities. The event is open to the public and will provide an opportunity to see the new building and its many features.

The Whitaker Building, which is located on the corner of Mass. Ave. and Spring St., will house the departments of biology, chemistry, and physics. The building features state-of-the-art laboratories, classrooms, and offices, as well as a central plaza and a green roof.

The dedication ceremony will also feature a performance by the University's marching band and a speech by President Donald Trump. The event is expected to draw a large crowd, and the building will be open to the public for tours afterwards.
