Military problems discussed

The topic covered by Prof. Kaufmann as the first speaker was "The Military Problems of Victory in Vietnam." In his hour long talk he discussed three basic areas of this topic. First, he enumerated the uncertainties we face daily in fighting the Viet Cong, second, he talked about what we know about the Viet Cong and how they are controlled and supplemented by the Hanoi government, and third, he listed four alternatives for achieving victory in Vietnam.

Most important of the uncertainties is our lack of knowledge regarding the Viet Cong. Although extensive bombing might make the Viet Cong less effective, it is not possible to say how much it might make the Viet Cong less effective or how much it will damage the Viet Cong without endangering the lives of civilians.

The uncertainty arises in Hanoi's ability to determine the success of the various campaigns. Hanoi has not been able to determine the effect of the Viet Cong on the various campaigns, although extensive bombing might damage the Viet Cong without endangering the lives of civilians.

The second area is that of the military situation. The data on the effectiveness of military intervention is not clear, although extensive bombing might make the Viet Cong less effective, it is not possible to say how much it might make the Viet Cong less effective. Furthermore, extensive bombing might only make the Viet Cong more effective by showing that the Viet Cong is stronger than it really is.

The third area is that of the Vietnamization process. The data on the effectiveness of the Vietnamization process is not clear, although extensive bombing might make the Viet Cong less effective, it is not possible to say how much it might make the Viet Cong less effective. Furthermore, extensive bombing might only make the Viet Cong more effective by showing that the Viet Cong is stronger than it really is.

Victory in Viet Nam Advocated

150 attend MIT symposium

By Jim Smith

"There are no experts on Vietnam, myself included," said Prof. Kaufmann, "but there are scientists who have been working for some years and who have some uncertainties about both actions and effects." These were some of the opening comments of Prof. Kaufmann, who is a member of the MIT Committee for Victory in Vietnam. The symposium was sponsored by the MIT Committee for Victory in Vietnam and the symposium group founded only recently in reaction to the well-publicized anti-Vietnam sentiment on American campuses.

Prof. Kaufmann, and beyond this we do not understand the relationship among the various components of the Viet Cong, asserted Prof. Kaufmann. Indeed, we do not understand the relationship between the Viet Cong and Hanoi, and we do not know which of the Viet Cong is trying to do. We do not know how and where we stand at any given moment.

Next, Prof. Kaufmann discussed what we do not know about the Viet Cong and their war. He discussed Communist forces in Indo-China, the hard-core, main force guerrillas, of whom there are about 27,000 and 37,000, and the Viet Minh Central Revolutionary Regiments; second, the local guerrillas, of whom there are about 80,000; third, the logistical and political cadres, of whom there are about 80,000; fourth, the Viet Minh Central Revolutionary Regiments; and fifth, the Viet Cong and Hanoi government. He also enumerated the uncertainties of the Viet Cong, the Viet Minh Central Revolutionary Regiments, and the local guerrillas, of whom there are about 80,000, the logistical and political cadres, of whom there are about 80,000, and the Viet Minh Central Revolutionary Regiments.

The total is 210,000 to 230,000. The relationship between the Viet Cong and Hanoi is not understood, although extensive bombing might make the Viet Cong less effective, it is not possible to say how much it might make the Viet Cong less effective or how much it will damage the Viet Cong without endangering the lives of civilians.

The uncertainty arises in Hanoi's ability to determine the success of the various campaigns. Hanoi has not been able to determine the effect of the Viet Cong on the various campaigns, although extensive bombing might damage the Viet Cong without endangering the lives of civilians.
